                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Current Zener Impendence Max.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Current Zener Impendence Max.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      | Current Zener Impendence Max. 

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Current Zener Impendence Max. 

 

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Current Zener Impendence Max. 

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         | Current Zener Impendence Max.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    | January January                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | The state of the s                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | ## ODD TERM END EXAM NOV/DEC -2017

EXAM SEAT NO		

LEVEL: FIRST

PROGRAM: EE/IE/E&TC/IT

COURSE CODE: CCF102/CCE102/R103/R104/X102/X108 COURSE NAME: ENGINEERING PHYSICS

MAX. MARKS: 80 TIME: 3 HRS.

DATE: 11/12/2017

#### Instruction:-

- 1) Answers must be written in the main answer book provided. (and supplements if required)
- 2) Illustrate your answers with sketches where ever necessary.
- 3) Use of non-programmable pocket calculator is permissible.
- 4) Mathematical and other tables will be made available on request.
- 5) Assume and mention suitable additional data necessary.
- 6) Use of Mobile is strictly prohibited.
- 7) QN>Question No, SQN>Sub-Question No, R> Remembering, U>Understanding, A>Application CO>Course outcome

QN	S Q N	Question Text	R U A	Co CCF102-	Marl
Q.1		Attempt any FOUR			(08)
	a)	State and explain Hookes law of elasticity.	R	1	
	b)	Steel is more elastic than rubber. Explain.	U	1	
	c)	Define density and specific gravity.	R	1	
	d)	State effect of temperature and Adulteration on surface tension.	R	. 1	
	e)	Define free oscillations and forced oscillations.	R	2	
	f)	Define i) Nanoscale ii) Nanometer	R	3	
Q.2		Attempt any FOUR	+		(16)
	a)	Explain behavior of wire under continuously increasing load.	U	1	(10)
	b)	A wire of diameter 4mm and length 2m extends by 2mm when a		1	
		force of 10 N is applied. Find Young's modulus of the wire.	A	1	
	c)	State and explain Newton's law of viscosity. Define coefficient of			
		viscosity and derive its S.I unit.	U	1	
	d)	Define capillary action. Give its three examples.	R	1	
	e)	Define i) Cohesive force ii) Adhesive force iii) Molecular Range	$\vdash$		
		iv) Sphere of influence.	R	1	
	f)	i) Write any two examples of Nano structured material.			
		ii) Write any two characteristics of Transverse wave.	U	2	
2.3		Attempt any FOUR	-		(16)
	a)	Derive expression for coefficient of viscosity of liquid by stokes			(10)
		method.	A	1	
	b)	Explain Laplace's molecular theory for surface tension.	U	1	
		i) State Stokes law.	+	1	
		ii) Define velocity gradient with S.I. Unit.	R	1	
~~~				P	T.O

	d)	Define i) Amplitude ii) Wave period iii) Frequency iv)	R	2	
1.		Wavelength.			
6	e)	Define longitudinal wave and Transverse wave. Give one examples each.	R	2	
	f)	State any four applications of Nanotechnology.	R	3	
Q.4		Attempt any FOUR			(08)
	a)	Define i) dispersion ii) dispersive power.	R	4	
	b)	State and explain Ohm's law.	R	4	
	c)	Draw a neat sketch of a Coolidge X-ray tube.	R	5	
	d)	Mention any two applications of optical fiber.	R	6	
	e)	When a resistance of $262\Omega$ is connected in the right gap of a meter		4	
		bridge. The balancing length is found at 48cm from the left end.	A	4	
		Calculate the resistance in the left gap.			
	f)	Draw a neat sketch showing the structure of an optical fiber.	R	6	
Q.5		Attempt any FOUR			(16)
	a)	Derive the prism formula.	A	4	
	b)	State any four characteristics of photo-electric effect.	U	5	
	c)	Mention any four applications of laser	R	5	***************************************
	d)	Explain the propagation of light through an optical fiber.	U	6	
	e)	State any four properties of X-rays.	R	5 ·	
	f)	When two resistances are connected in series the effective			
		resistance is $100\Omega$ but when connected in parallel the effective	A	4	
		resistance is 24 $\Omega$ . Calculate the two resistances.			
Q.6		Attempt any FOUR			(16)
	a)	Derive an expression for equivalent resistance, when three resistances are connected in parallel.	A	4	
	b)	With the help of a neat diagram explain the construction of a photocell	U	5	
	c)	State and explain four properties of laser.	U	5	
	d)	Mention any four advantages of optical fiber over conventional metal conductors.	R	6	
	e)	For an equilateral prism the angle of minimum deviation in 39°. Calculate its refractive index.	A	4	
	f)	When a light of wavelength $5400^{0}$ A is incident on a metal plate, electrons are emitted with zero velocity. Calculate the threshold frequency and work function. (Given: h=6.625 x10 <sup>-34</sup> Js, C=3 x10 <sup>8</sup> m/s)	A	5	
		m/s) ************			

(An Autonomous Institute of Govt. of Maharashtra)

## ODD TERM END EXAM NOV/DEC -2017

EXAM SEAT NO.	
---------------	--

LEVEL: FIFTH

PROGRAM: INDUSTRIAL ELECTRONICS.

**COURSE CODE: IEE505** 

COURSE NAME: OPTOELECTRONICS.

MAX. MARKS: 80

TIME: 3 HRS.

DATE: 11/12/2017

#### Instruction:-

- 1) Answer to two sections must be written in separate section answer book provided.
- 2) Figure to the right indicates marks.
- 3) Illustrate your answers with sketches wherever necessary.
- 4) Use of non-programmable pocket calculator is permissible.
- 5) Mathematical and other tables shall be made available on request.
- 6) Assume additional suitable data necessary.
- 7) Use of Mobile is strictly prohibited.

#### Section - I

Marks

## Q.1 Attempt any FOUR

(08)

- a) Draw the spectrum of light with neat labels.
- b) Give four applications of LED.
- c) State the function of optical source and give its classification.
- d) Define the terms: i) Light intensity, ii) Optical power.
- e) State the materials used for construction of LASER.
- f) Differentiate between heterojunction and homojunction LED with two points.

## Q.2 Attempt any FOUR

(16)

- a) Explain the following concept with proper diagram
  - i) Spontaneous emission, ii) Stimulated emission.
- b) Draw and explain construction of surface emitter LED.
- c) Define the following terms w.r.t. light
  - i) Refractive index, ii) Reflection, iii) Refraction, iv) Polarization.
- d) Explain the operation of semiconductor injection LASER diode with proper diagram.
- e) State any four advantages and disadvantages of LED as compared with LASER.
- f) With the help of proper diagram explain the output spectrum and optical power output characteristics of LED.

## Q.3 Attempt any FOUR

(16)

- a) Explain construction of incandescent lamp with neat diagram.
- b) State and explain characteristic of LASER.

(P.T.O.)

c) With neat diagram, explain construction of planar LED and dome LED. d) Explain the concept of photon and plank's law. e) Draw and explain construction and working of fabry-perot resonant cavity. f) Compare between LED and LASER with respects to following points – i) Principle of operation, ii) Spectral width, iii) Coupling efficiency, iv) Noise. Section - II Marks Attempt any FOUR Q.4 (08)a) Give any two merits & two demerits of photo resistor. b) Classify thermal detectors. c) Draw equivalent circuit for photodiode. d) State any four applications of optocouplers. e) Draw spectral response of avalanche photodiode. f) Define & give mathematical expression of conversion efficiency for solar cell. Attempt any FOUR (16)a) Draw & explain working of avalanche photodiode. b) Enlist two applications of PIN photodiode & two applications of phototransistor. c) Explain following optocoupler specifications i) Current transfer ratio, ii) Insulation voltage. d) Draw & explain super twisted nematic LCD. e) Draw & explain selenium photovoltaic cell. f) Give applications of photo resistor (any four) Q.6 Attempt any FOUR (16)a) Draw circuit diagram & explain switching action by LDR. b) Draw spectral response of PIN & explain. c) Compare between photodiode & photoresistor. d) Draw equivalent circuit for solar cell & enlist four applications of solar cell. e) Draw common anode & common cathode LED display & enlist four characteristics of LED display. f) Draw symbol & constructional diagram of photo darlington & state its four applications. \*\*\*\*

Q.5

(An Autonomous Institute of Govt. of Maharashtra)

# ODD TERM END EXAM NOV/DEC

TERM END EXAMINO	V/DEC -2017
EXAM SEAT NO.	

LEVEL: FOURTH COURSE CODE: IEE403

PROGRAM: INDUSTRIAL ELECTRONICS. COURSE NAME: INSTRUMENTATION.

MAX. MARKS: 80

TIME: 3 HRS. DATE: 07/12/2017

#### Instruction:-

- 1) Answer to two sections must be written in separate section answer book provided.
- 2) Figure to the right indicates marks.
- 3) Illustrate your answers with sketches wherever necessary.
- 4) Use of non-programmable pocket calculator is permissible.
- 5) Mathematical and other tables shall be made available on request.
- 6) Assume additional suitable data necessary.
- 7) Use of Mobile is strictly prohibited.

## Section - I

Marks

#### Q.1 Attempt any FOUR

(08)

- a) State any two temperature scales. Convert 77°F to degree centigrade.
- b) Enlist any four basic requirement for selection of transducer.
- c) Write any two cases where pyrometer is used.
- d) Write two transducers used for measurement of angular displacement.
- e) State any two applications of ultrasonic level measurement method.
- f) Differentiate following transducers as active and passive transducers
  - i) Piezo-electric transducers. ii) Inductive Transducers. iii) Piezoresistive transducers iv) Thermo couple.

#### Q.2Attempt any FOUR

(16)

- a) Define NTC and PTC. Give one example of NTC and PTC type transducer.
- b) Explain working of photo-sensitive transducer with its example, with necessary diagram.
- c) Describe the measurement of level using float type method with neat diagram.
- d) Draw & describe the construction of thermocouple. Give its two applications.
- e) Classify transducers on the basis of type of output. Give example of each.
- f) Explain with neat diagram any one the capacitive type level measurement using neat diagram List its advantages and dis-advantages.

#### Q.3 Attempt any FOUR

(16)

- a) Define electrical transducer. Give advantages of electrical transducers.
- b) Describe the working of radiation pyrometer with its neat diagram.

c) With neat constructional diagram, explain the working of LVDT. d) Describe use of synchros for measurement of displacement. e) Explain cold junction compensation technique used in thermocouple. f) Compare RTD and thermister for following points ii) Material used iii) Type of temperatuse i) Working principle, coefficient iv) Range of measurement. Marks Section - II (08)Attempt any FOUR **Q.4** a) What are different pressure sensing elements? b) Why are dummy gauges used? c) Draw a neat labeled diagram of flow meter using a hot wire anemometer. d) Define Telemetry. e) Design operational amplifier as an inverter. f) What do you mean by Data acquisition system? (16)Attempt any FOUR 0.5 a) Draw and explain C-shaped bourdon tube and Helical bourdon tube. b) Explain with proper diagram how flow can be measured using thermistor. c) Draw a block diagram of general telemetry system and explain function of each block. d) Explain Pulse Code Modulation (PCM) Telemetry system with neat block diagram. e) Explain the terms preamplification and filtering with respect to the signal conditioning. f) Explain multichannel data acquisition system with neat diagram. (16)Q.6 Attempt any FOUR a) Explain any one piezo electric transducer for pressure measurement. b) Draw a neat diagram of Electromagnetic flow meter. State its advantages, disadvantages & applications. c) State different types of telemetry system. Explain R.F. Telemetry. d) Explain various telemetry transmission channels and media. e) Explain following terms: i) Ratio metric Conversion, ii) Logarithmic compression. f) Draw and explain block diagram of DC signal conditioning system. \*\*\*\*

(An Autonomous Institute of Govt. of Maharashtra)

## ODD TERM END EXAM NOV/DEC -2017

EXAM SEAT NO.			
---------------	--	--	--

LEVEL: FOURTH

PROGRAM: IE /E&TC

COURSE CODE: ETE/IEE402/IX/EJ302 COURSE NAME: 8051 MICROCONTROLLER

MAX. MARKS: 80

TIME: 3 HRS.

DATE: 05/12/2017

#### Instruction:-

- 1) Answer to two sections must be written in separate section answer book provided.
- 2) Figure to the right indicates marks.
- 3) Illustrate your answers with sketches wherever necessary.
- 4) Use of non-programmable pocket calculator is permissible.
- 5) Mathematical and other tables shall be made available on request.
- 6) Assume additional suitable data necessary.
- 7) Use of Mobile is strictly prohibited.

## Section - I

Marks

#### Q.1 Attempt any FOUR

(08)

- a) What are the different types of buses?
- b) Describe the function of stack pointer.
- c) What do you mean by bit addressable and byte addressable memory?
- d) State the function of  $\overline{PSEN}$  and ALE pins of 8051 microcontroller.
- e) State any two byte-wise conditional jump instruction.
- f) Enlist different logical instructions of 8051 microcontroller.

#### Q.2Attempt any FOUR

(16)

- a) With the help of neat diagram, explain 8 bit UART mode of 8051 microcontroller.
- b) State the difference between Harvard and Von-Neumann architecture with suitable diagram.
- c) Describe the addressing modes of 8051 microcontroller with suitable examples.
- d) Explain function of following registers
  - **PSW** Register i)
  - **DPTR** ii)
- e) Describe two instructions of 8051 microcontroller each related with external data memory and program memory access.
- f) Write a program to find how many ODD numbers are present in the array of 10 numbers stored in internal RAM memory.

#### Attempt any FOUR Q.3

(16)

- a) Differentiate between microprocessor and microcontroller (any four
- b) With the help of neat diagram explain the operation of mode 2 of timer of 8051 microcontroller.
- c) Write the format of SCON register and explain it.
- d) Write an 8051 based ALP to transfer 10 bytes in external RAM memory starting from location 7340H to the memory location starting from 7400H.
- e) Describe the function of following instructions:
  - i) SWAP A
  - XCH A, Rr
- f) Write an assembly language program to add two BCD numbers stored in register bank 1.

(08)

## Q.4 Attempt any FOUR

- a) State any four applications of 8051 microcontroller.
- b) What value should be loaded in TMOD SFR to configure timer  $\phi$  in mode 2 & counter 1 in mode 1.
- c) State the significance of SMOD bit in PCON SFR.
- d) State any two advantages of LCD display over seven –segment display.
- e) What will be the step size of ADC 0804 if voltage at  $V_{ref}/2$  pin =1.28 V?
- f) State the two features of temperature sensor LM35.

## Q.5 Attempt any FOUR

(16)

- a) Draw a neat interfacing diagram of 8051 microcontroller with relay.
- b) Consider ADC 0804 is interfaced with 8051 microcontroller. Write an assembly language program to read the ADC continuously and send the data on port.
- c) Write an assembly language program to receive the data serially at a baud rate of 9600. Assume crystal frequency = 11.0592 MHz
- d) Consider LED are connected to port 1. Write an assembly language program to flash LEDs at an interval of 10 msec. continuously. Assume crystal frequency =12 MHz.
- e) Write an assembly language program to measure the width of a pulse applied externally to 8051 microcontroller and send it to port 1 continuously. Assume crystal frequency=12 MHz.
- f) Consider a stepper motor is interfaced with 8051 microcontroller and a switch is connected to P1. $\phi$ . Write an assembly language program to perform the following.
  - i) When switch =0, rotate the stepper motor clockwise
  - ii) When switch =1, rotate the stepper motor anticlockwise

## Q.6 Attempt any TWO

(16)

- a) Design a 8051 microcontroller based function generator that will generate various waveforms such as ramp wave, sawtooth wave, square wave, staircase wave etc.(Draw complete hardware schematic and assembly language program)
- b) Draw a neat labled interfacing diagram of 8051 microcontroller with LCD display. Also Write an assembly language program to display the massage "INDIA"
- c) Write an assembly language program to perform the following
  - i) To generate a square wave of frequency 1 KHz at P2. $\phi$
  - ii) To transmit a word "ETX" at baud rate of 1200. Assume crystal frequency =11.0592 MHz

\*\*\*\*\*\*

(An Autonomous Institute of Govt. of Maharashtra)

**APPLICATIONS** 

MAX. MARKS: 80

TIME: 3 HRS.

DATE: 06/12/2017

## Instruction:-

- 1) Answers must be written in the main answer book provided. (and supplements if required)
- 2) Illustrate your answers with sketches where ever necessary.
- 3) Use of non-programmable pocket calculator is permissible.
- 4) Mathematical and other tables will be made available on request.
- 5) Assume and mention suitable additional data necessary.
- 6) Use of Mobile is strictly prohibited.
- 7) QN>Question No, SQN>Sub-Question No, R> Remembering, U>Understanding, A>Application CO>Course outcome

QN	Q N	Question Text	R	Co EIF306	Marl
Q.1		Attempt any FOUR	A		(0.0)
	(a)	Draw pinout diagram of 7408.	D		(08)
	b)		R	3	
	(c)		R	2	
		i) 101110 ii) 101010	A	1	
	d)		-		
	e)	Draw symbols and logical expressions for	R	3	
		i) NAND			
		ii) EX-OR	R	2	
	f)	Convert the following	44		
		i) $(110101)_2=()_{10}$		8 2 2	
		ii) $(420)_{10} = ()_2$	A	1	
2.2		Attempt any FOUR	11		
	a)	Explain following characteristics of logic families			(16)
		i) Noise immunity		7,	
		ii) Power Dissipation	U	3	
	b)	State and prove De-Morgan's theorems.			
7	c)	Solve $(14)_{10}$ - $(24)_{10}$ in BCD using 9's and 10's complement.	U	2	
+		Explain operation of 2:	A	1	
$\dashv$	e)	Explain operation of 3-input TTL NAND gate with circuit diagram.	U	3	
		In the following circuits, the switches may be ON (1) or OFF (0).			
		And will cause the bulb to be ON (1) or OFF (0). Consider all			
		possible conditions of the switches s1 and s2, identify the logic			
		gates and write its truth table.			
		, , , , , , , , , , , , , , , , , , , ,			
		$S_1$ $S_2$ $II)$	A	2	
	1	(3) Bulb 1			
		7 - 32 (3) BWb			
1		T is a second			
1	()	Compare COMS and ECL on the basis of i) Basic gate ii) Noise	_		
	1	mmunity iii) Power dissipation iv) propagation delay.	U	3	

P.T.O

2.3	T	Attempt any FOUR			(16)
		The state of 2 input COMS NAND and 2, input	U	3	
		COMS NOR gate.		3	
	b)	Minimize the following expression using k-map and realize using			
		the basic gates.	A	2	
		$Y=\sum m(1,2,9,10,11,14,15)$			
	c)	Perform binary subtractions using 2's complements of following	A	1	
		i) $(63)_{10} - (20)_{10} = ?$ ii) $(34)_{10} - (48)_{10} = ?$	U	3	
	d)	Explain working of COMS inverter with circuit inverter.	0	3	
	e)	Simplify the following and realize it	A	2	
		$Y = A + \overline{ABC} + \overline{ABC} + ABC + \overline{AB}$	+		
	f)	Convert the following number into its equivalent = $(146.25)_{10}$	A	1 **	
		i) Binary number ii) Octal number	7 1	•	
2.4					(08)
Q.4 		Attempt any FOUR			-
	a)	State what is combinational circuit? Draw logic diagram of 2:1	R	4	
		mux.			
	b)	Draw circuit diagram and truth table of SR filp flop.	R	5	
	(c)	Give the advantages of static RAM.	R	6	
	(d)	Draw pin diagram of IC7483.	R	4	
	(e)	State the applications of shift register. (any 2)	R	5	
	f)	Draw block diagram of Dual slop ADC.	R	6	
Q.5	-	Attempt any FOUR		T.	(16)
	(a)	Implement full adder circuit by using half adder.	A	4	
	b)		A	5	
	(c)	Explain how binary data (101) <sub>2</sub> is converted into its analog form by		6	
		using binary weighted register DAC.	A	Ü	
	(d)	. 10 7402	A	4	
	(e)	and truth			
	(0)		U	5	
	1	table.	U	6	
	(f)			-	(16)
Q.6		Attempt any FOUR	A	4	(20)
	a)				
- a maddalladary'i ook	b)		U	5	
	c)		U	6	
	d		U	4	
	e		A	5	
	+f	Explain IC PCF8591, 8 bit ADC -DAC converter.	U	6	

(An Autonomous Institute of Govt. of Maharashtra)

## **ODD TERM**

עי	TERM END EXAM NOV	//DEC -201'
	EXAM SEAT NO.	

LEVEL: Third

COURSE CODE: ETE307/IEE307

MAX. MARKS: 80

PROGRAM: IE/E&TC

COURSE NAME: LINEAR INTEGRATED CIRCUITS

TIME: 3 HRS.

DATE: 20/11/2017

#### Instruction:-

- 1) Answers must be written in the main answer book provided. (and supplements if required)
- 2) Figure to the right indicates marks.
- 3) Illustrate your answers with sketches wherever necessary.
- 4) Use of non-programmable pocket calculator is permissible.
- 5) Mathematical and other tables shall be made available on request.
- 6) Assume additional suitable data necessary.
- 7) Use of Mobile is strictly prohibited.

#### Q.1 Attempt any FOUR

Marks (08)

- a) Define CMRR. State its formula
- b) State any four feature of IC741.
- c) What are the advantages of Op-amp?
- d) Define i) Input offset current ii) Input bias current
- e) State the concept of virtual ground.
- What is the gain of non-inverting amplifier if  $R_f = 5k\Omega$  and  $R_i = 1k\Omega$

#### Q.2Attempt any FOUR

(16)

- a) Explain output stage of op-amp with neat diagram.
- b) Draw the block diagram of op-amp. State the function of any two block.
- c) State ideal and typical value of the following parameters of IC741.
  - i) Supply voltage rejection ratio
  - ii) Common mode rejection ratio
  - iii) Slew rate
  - iv) Gain bandwidth
- d) Draw active ideal integrator circuit. State the output voltage expression.
- e) Draw circuit diagram of V-I converter of floating load. Derive expression for its output.
- f) Draw circuit diagram of antilog amplifier. State its equation for output voltage.

#### Q.3 Attempt any FOUR

(16)

- a) Explain with circuit diagram cascaded differential amplifier.
- b) Explain constant current source with neat diagram.
- c) Draw the equivalent circuit of op-amp. Define the terms input resistance and input capacitance.

- d) Sketch the voltage transfer curve of op-amp and explain it.
- e) Drive the expression for output voltage of inverting summing amplifier.
- f) Explain positive peak detector with circuit diagram.

## Q.4 Attempt any FOUR

(08)

- a) State the Barkhausen criteria for oscillators.
- b) What is filter? Give different types of filter.
- c) Give any four specification of IC710 comparator.
- d) Draw pin diagram for IC555.
- e) Define the terms i) Lock in range ii) Capture range.
- f) List two merits and two demerits of active filter over passive filter.

## Q.5 Attempt any FOUR

(16)

- a) Explain block diagram of IC566
- b) Compare between voltage comparator and Schmitt trigger with four points.
- c) Draw circuit diagram and frequency response of first order low pass butter worth filter. Give expression of cut-off frequency and gain.
- d) Explain operation of an astable multivibrator with neat diagram using IC555.
- e) With neat circuit diagram, explain operation of frequency multiplier using IC565.
- f) Draw phase shift oscillator using IC741. State the equation for output frequency.

## Q.6 Attempt any FOUR

(16)

- a) For a first order Butterworth low-pass filter. Calculate the cut off frequency if  $R=10k\Omega \ \ \text{and} \ \ C=0.001\mu\text{f}. \ \ \text{Also} \ \ \text{calculate} \ \ \text{the pass band voltage gain if}$   $R_{I}=10k\Omega \ \ \text{and} \ \ R_{F}=100k\Omega.$
- b) Draw and explain operation of inverting comparator with proper waveforms.
- c) Explain operation of water level controller using IC555.
- d) Draw circuit and input output waveforms for Schmitt trigger using IC555.
- e) Compare between RC phase shift oscillator and Wien bridge oscillator using op-amp with any four points.
- f) Draw circuit diagram for bistable multivibrator using op-amp and explain its operation.

## ODD TERM END EXAM NOV. / DEC. -2017 EXAM SEAT NO.

LEVEL: - THIRD

PROGRAM: IE & E & TC

COURSE CODE :- EIF303/IX/EJ203/IEE/ETE303

COURSE NAME :- ELECTRONICS MEASURING INSTRUMENTS

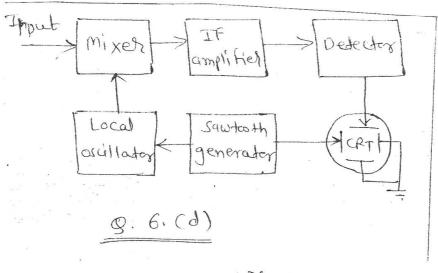

MAX. MARKS: 80 TIME: 3 HRS. DATE: 02/12/2017

### Instruction:-

- 1) Answers must be written in the main answer book provided.( and supplements if required)
- 2) Illustrate your answers with sketches wherever necessary.
- 3) Use of non-programmable pocket calculator is permissible.
- 4) Mathematical and other tables shall be made available on request.
- 5) Assume and mention suitable additional data if necessary.
- 6) Use of Mobile is strictly prohibited.
- 7) QN > Question No., SQN> Question No. R> Remembering, U> Understanding, A> Application.

Q N	S Q N	Question Text	R/ U/ A	CO Cod e	Mark s
Q.1		Attempt any FOUR		5E11303	08
	a)	State different types of errors present in electronic instruments.	R	1	
	b)	Define following terms i) Accuracy ii) Precision	R	1	
	c)	Enlist any four AC bridges.	R	2	100000000000000000000000000000000000000
- 1640 (8.1 140)	d)	State any two uses of Wien's bridge	R	2	
To Make State Comp	e)	Define the term i) Sensitivity ii) Resolution.	R	3	
	f)	State methods by which you can identify digital display is accurate.	R	3	
Q.2		Attempt any FOUR	* ***		16
	a)	Explain the need of calibration.	$\frac{1}{U}$	1	
	b)	Explain the operation dual slope DVM with the help of diagram.		3	
	c)	Calculate unknown value of a capacitor using Schering's bridge.	$\frac{1}{A}$	2	
	d)	Draw and explain operation of LCR meter.	U	3	
The second constitution of	e)	State any four advantages of digital frequency meter.	+ U	3	
	f)	State any two limitations and advantages of Maxwell's Bridge	TU T	2	Modern R. I
2.3	•	Attempt any FOUR		· · · · · · · · · · · · · · · · · · ·	
	a)	Identify name of bridge which is used as modified Maxwell's bridge and drive its equation.	A	2	16
	b)	Compare digital instruments and Analog instruments (any four points)	U	3	
	c)	Explain systematic errors and Random error in detail.	$+_{U}+$	1	
	d)	Draw and explain Hay bridge.		2	
	e)	Explain construction and working principle of PMMC.	A	3	
	f)	Explain capacitance comparison bridge and give any two applications of it.	U	2	

Q	S Q	Question Text	R/ U/	CO Cod e	Mark s
N	N		A	€1F306	
Q.4	+-	Attempt any FOUR			08
	a)	Draw general block diagram of CRO probe.	R	4	
	b)	Define spectrum analyzer.	R	5	
	c)	State any two applications of strip chart recorder.	R	5	
	d)	Define X-Y recorder.	R	5	
	e)	Write the function of time base generator and trigger circuit in CRO	R	4	
	f)	Define deflection sensitivity and write its formula.	R	4	
Q.5	-	Attempt any FOUR			
- A was droven makes again	a)	Draw block diagram of X-Y recorder. State any two applications of it.	A	5	16
	b)	Explain how CRO can be used to test i) Diode ii) Transistor.	A	4	
	c)	Draw diagram of circular chart recorder.	U	5	
	d)	Explain with diagram input coupling selector.	Ū	4	
	e)	Draw a neat labeled diagram of CRT.	U	4	
	f)	Draw block diagram of pulse generator. Justify how can you vary the duty cycle of the pulse in block diagram of it.	A	5	
Q.6		Attempt any FOUR			16
	a)	Draw and explain the type of CRO probe used to measure current in the circuit.	A	4	16
	b)	Draw and explain block diagram of logic analyzer.	U	5	
	c)	Compare between single beam and dual beam CRO on basis of following points i) Number of electron beam ii) Cost iii) Number of vertical amplifiers used iv) Definition.	U	4	
	d)	Identify the given diagram shown in figure and explain its working.	A	5	111 ALEXO X-61
	e)	Define signal generator. Draw block diagram of RF type signal generator.	U	5	OC 14 1242 2
	f)	Explain with diagram use of lissajous patterns for phase measurement.

## ODD TERM END EXAM NOV. / DEC. -2017 EXAM SEAT NO.

LEVEL: - THIRD

PROGRAM: IE & E & TC

COURSE CODE :- EIF305 / IEE/ETE305 / EJ205

COURSE NAME :- ANALOG COMMUNICATION

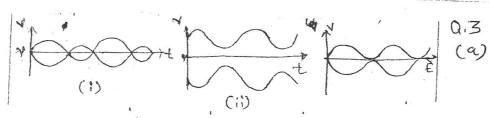

MAX. MARKS: 80 TIME: 3 HRS.

DATE: - 04/12/2017

### Instruction:-

- 1) Answers must be written in the main answer book provided.( and supplements if required)
- 2) Illustrate your answers with sketches wherever necessary.
- 3) Use of non-programmable pocket calculator is permissible.
- 4) Mathematical and other tables shall be made available on request.
- 5) Assume and mention suitable additional data \* necessary.
- 6) Use of Mobile is strictly prohibited.
- 7) QN > Question No., SQN> Question No. R> Remembering, U> Understanding, A> Application.

QN		Question Text			
	Q	( sandi Tont	R/	CO Cod	Ma
	N		U/	e	İ
2.1		Attempt any FOUR	A	EIF305	
	a)				0
	1	Define i) Bandwidth ii) Information capacity.	R	1	
	(b)	State the significance of modulation index in AM transmission.	U	2	
	(c)	Calculate the modulation index for FM if modulating frequency is 1 KHz and maximum deviation is 1.6 KHz.	A	3	
	ļ.,	Enlist any two examples of simplex and duplex communication system.	R	I	
	(e)	List any two advantages and disadvantages of single sideband (SSB) technique.	R	2	
	f)	Draw circuit diagram of varactor modulator used for FM generation.	R	3	
.2		Attempt any FOUR			M 3 144
	a)	Draw and explain the elect		-	16
	b)	Draw and explain the electromagnetic frequency spectrum.	U	1	
1	0)	In FM, if maximum deviation is 75 KHz and the maximum	A	3	
		bandwidth of FM.		3	
1	c)	Derive a mathematical expression for amplitude modulated wave.		Part of the Control o	
1	d)	serine modulation and explain need of modulation	U	2	
	e)	Differentiate between AM and EM on the barries in a	U .	1	
-	f)	1) Dandwidth III) Wodulation index iv) Application	U	3	
-	1)	Draw and explain block diagram of high level modulated AM transmitter.	A	2	
		Attempt any FOUR			
	a)	Suggest suitable value of modulation index for AM waveform as shown in figure and justify it.	Λ	2	16

QN"	S Q N	Question Text	R/ U/ A	CO Cod e EIF305	Mark s
and the state of the state of	b)	Draw block diagram of Armstrong method to generate FM Wave and explain its working.	U	3	
	c)	An AM transmitter, transmits signal at 50 KW with modulation depth as 85 percent. Calculate the carrier power and total sideband power in the transmitted signal.	A	2	
	d)	Draw and explain basic electronic communication system.	U	1	Marches, 12 miles of the order
	e)	Describe vestigial sideband (VSB) modulation technique. Compare VSB to conventional AM.	U	2	
	f)	Compare wideband FM and Narrowband FM on the basis of following points.  i) Modulation index ii) Maximum deviation iii) Range of modulating frequency iv) Applications.	R	4	
Q.4		Attempt any FOUR			08
	a)	State the frequency ranges for ground wave and space wave propagation.	R	6	00
	b)	Explain the working of PLL detector.	U	4	*************
	c)	Differentiate between antenna gain and directive gain for an antenna.	U	4	
	d)	Define radiation pattern of an antenna. Draw of any one antenna with proper label.	R	5	
	e)	List the functions of limiter block of an FM receiver.	R	4	
	f)	Draw the S-curve for any FM detector.	R	4	
Q.5		Attempt any FOUR		· · · · · · · · · · · · · · · · · · ·	16
	a)	Quality of FM reception is superior than the quality of AM reception. Justify.	U	5	100.7
	b)	Define the following terms with respect to antenna i) Power gain ii) Antenna resistance.	R	6	
	c)	Draw the block diagram of FM receiver with output waveform at the output of each block.	U	4	
	d)	Interpret on charging and discharging time constants of the capacitor in a simple envelope detector.	A	4	(# 1841 O 185 E
	e)	With the help of diagram explain multipath space wave propogation.	U	6	
-	f)	Draw and explain simple slope FM detector. Mention its merits and demerits.	U	4	
Q.6		Attempt any FOUR			16
lv.	a)	State whether trace of false: Amplitude limiter is not required prior to the ratio detector.	A	4	282 10, 4
	b)	Explain the working of helical antenna with the help of diagram.	U	5	
	c)	Describe the strata of the ionosphere and their effect on sky wave propogation.	U	6	
	d)	With the help of radiation pattern explain the working of loop antenna.	U	6	
	e)	Explain the fading effect. List major causes and remedies to overcome fading effect.	U	6	
	f)	Explain the working of parabolic reflector antenna with its structure and radiation pattern.	A	8

DATE: 27/11/2017

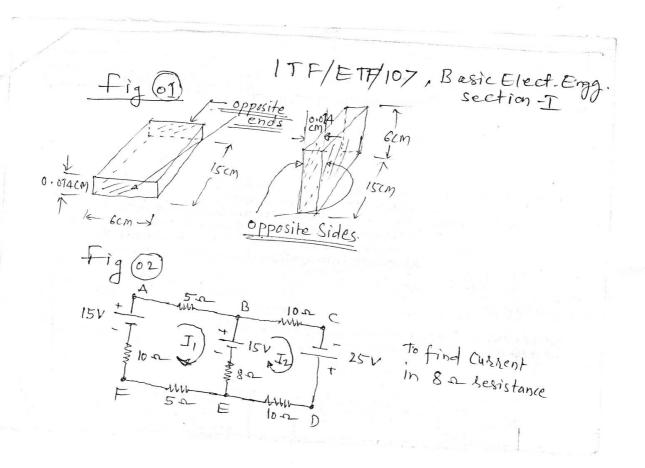

#### Instruction:-

- 1) Answers must be written in the main answer book provided. (and supplements if required)
- 2) Illustrate your answers with sketches where ever necessary.
- 3) Use of non-programmable pocket calculator is permissible.
- 4) Mathematical and other tables will be made available on request.
- 5) Assume and mention suitable additional data necessary.
- 6) Use of Mobile is strictly prohibited.
- 7) QN>Question No, SQN>Sub-Question No, R> Remembering, U>Understanding, A>Application CO>Course outcome

QN	S	Question Text		1	Ma
	Q N		R U	CO EIF107	Marl
Q.1		Attempt any FOUR	A		(08)
	(a)	What is the law of resistance?	R	1	(08)
	b)	Explain with suitable sketch voltage drop & Terminal voltage.	U	1	
	c)	State Kirchhoff's voltage law.	R	1	
	d)	State faraday's First & Second law with suitable sketch & expression for electro magnetic Induction.	U	3	
	e)	How to determine the direction of induced emf or current?	U	3	
~	f)	State an expression for self inductance considering magnetic terms of the circuits.	R	3	
2.2		Attempt any FOUR			(16)
	a)	Define & Explain with suitable sketch. Ohms law of Magnetic circuit.	U	. 2	(10)
	b)	diameter of 25 cm. An air gap of 0.4 mm has been cut across the section of the ring. The ring is wound with a coil of 200 turns through which a current of 2 Amp is passed. If the total magnetic flux is 0.24 mwb, find relative permeability of iron.	A	2	
	-\	Neglect leakage of fringing.			
	c)	Draw labeled sketch of hysteresis loop & Explain Hysteresis loss of magnetic circuit.	U	2	

	d)	The resistivity of a ferric – chromium-Aluminium alloy is 51	A	1	-
		$\times 10^{-8} \Omega \text{m}$ . A sheet of such material is 15 cm long, 6 cm wide			
		& 0.014 cm thick. Determine resistance between – i)			
		Opposite ends ii) Opposite side. (see fig (01))			
	e)	Solve the given network using KCL & KVL to find the	A	1	
	- /	current in $8\Omega$ resistor. (See fig (02)	A	1	
	f)	Explain with suitable labeled sketch energy stored in the	U	2	
	-/	Magnetic field.		2	
Q.3		Attempt any FOUR		-	(16)
<b>~</b>	(a)	Explain the coefficient of Mutual inductance (M) using	U	3	(10)
		suitable sketches & their labels.		3	
	b)	State expressions of self inductance & Mutual Inductance	R	3	
		using magnetic circuits terms & explain the terms with their			
		units.			
	c)	Differentiate between DC & AC current. Draw suitable	U	1	
		circuit diagrams & wave forms & expressions.			
	d)	Explain the procedure of calculation of A.T. for series	U	2	-
		magnetic circuits.			
	e)	Explain the details of permeability of magnetic circuit.	U	2	
	f)	State & explain various type of magnets & their applications.	U	2	
Q.4		Attempt any FOUR			(08)
	a)	What is meant by 'out of phase voltages?'	U	4	
-	b)	Define the terms – i) Amplitude ii) Time period.	R	4	
	c)	Define admittance. State its unit.	R	5	
	d)	State types of earthing.	R	6	
	e)	Classify transformer on the basis of - i) No. of phases	R	6	
		ii) Construction.			
	f)	Define 'phase sequence'. State its importance.	R	6	
Q.5		Attempt any FOUR	-	g/3 / 1,0/2s,	(16)
	a)	Find the sum of following two emfs and express the answer in	A	4	-
		similar form; $e_1 = 100 \sin wt$ $e_2 = 100 \cos wt$			
	b)	Explain in brief how alternating voltage is generated.	U	4	
	c)	Define: i) RMS value ii) Average value iii) Cycle iv)	R	4	
		Frequency.		7.	
	d)	Express the instantaneous current given by	A	5	

(A+	e)	Explain purely resistive circuit with circuit diagram and	U	5	
		phasor diagram.			
	f)	Draw power triangle for R-C series circuit. Deduce the expressions for Real power, Reactive power and apparent power for R-C series circuit.	1	5	
Q.6		Attempt any FOUR			(16)
	a)	Draw the phasor diagrams showing 'lagging' and 'leading' alternating quantities. Explain in brief.	U	5	
	b)	A coil having a resistance of $4.5\Omega$ and inductance of $0.03H$ is connected across 230V, 50 Hz single phase supply mains, find current taken by coil.	A	5	
	c)	$\overline{V_1} = 3 + j6 \qquad \overline{V_2} = 2 + j4$ Calculate i) $\overline{V_1} + \overline{V_2}$ ii) $\overline{V_1} - \overline{V_2}$ iii) $\overline{V_1} \times \overline{V_2}$ iv) $\frac{\overline{V_1}}{\overline{V_2}}$	A	4	
	d)	Explain with diagram star connected 3 phase system.	U	6	
	e)	Explain advantages of poly phase system.	U	6	
	f)	Explain pipe earthing with neat diagram.	U	6	

(An Autonomous Institute of Govt. of Maharashtra)

Q.4		Attempt any FOUR			(08)
2.7	a)	State the condition for the equation $Mdx + Ndy = C$ is exact.	R	2	
	b)	Find order and degree of the following $\left(\frac{d^2y}{dx^2}\right)^3 + 3\left(\frac{dy}{dx}\right)^5 + 3y = 0$	U	2	
	c)	Find modules and amplitude of $1+i\sqrt{3}$	U	3	
	d)	Define order and degree of a D.E	R	2	
v	e)	If $\alpha = \frac{-1 + i\sqrt{3}}{2}$ and $\beta = \frac{-1 - \sqrt{3}i}{2}$ prove that i) $\alpha^2 = \beta$ ii) $\beta^2 = \alpha$	U	3	
	f)	If $z = 2 + i$ find the value of $z^2 - 2z + 1$	U	3	
Q.5		Attempt any FOUR			(16)
	a)	Simplify $\left[\sin\frac{\pi}{6} + i\cos\frac{\pi}{6}\right]^7$ using De-Moivers theorem.	A	3	
	b)	Solve: $\frac{dy}{dx} = e^{3x-2y} + x^2 e^{-2y}$	A	2	
	c)	dx	A	2	
	d)	Solve: $\frac{dy}{dx} = \frac{x^2 + y^2}{xy}$	A	2	
	e)		U	3	
* r**	f)	A particle starting with velocity has an acceleration (1-t <sup>2</sup> ) m/s <sup>2</sup> . When does it first come to rest? How has it then travelled?	A	2	
Q.6		Attempt any FOUR			(16)
	a)	· · · · · · · · · · · · · · · · · · ·	U	3	
	b)	If $Z_1, Z_2, Z_3, Z_4$ are the value of $\left[\cos\frac{\pi}{3} + i\sin\frac{\pi}{3}\right]^{\frac{3}{4}}$ . Show that $Z_1, Z_2, Z_3, Z_4 = 1$	U	3	
	(c)		U	3	
	. d		A	2	
	e)	Verify that $y = \sin(\log x)$ is a solution of differential equation $x^2 \frac{d^2 y}{dx^2} + x \frac{dy}{dx} + y = 0$	U	2	
1	-	Prove that $(1+i)^8 + (1-i)^8 = 32$ using De-Moiver Theorem.	1	3

- 1) Answer to each section must be written in separate answer book.
- 2) Illustrate your answers with sketches where ever necessary.
- 3) Use of non-programmable pocket calculator is permissible.
- 4) Mathematical and other tables will be made available on request.
- 5) Assume and mention suitable additional data necessary.
- 6) Use of Mobile is strictly prohibited.
- 7) QN>Question No, SQN>Sub-Question No, R> Remembering, U>Understanding, A>Application

QN	N	Question Text	Cog nitio n Leve l R/U/	Co Code	Mar ks
Q.1	+	Attempt any FOUR			(08)
	(a)	Find 'k' if the points (4, k), (2, 0) and (-4, -9) are collinear.	R	CCF106-1	(00)
. :	b)	Show that the roots of the equation $x^3 - 9x + 1 = 0$ lies between 2 and 3.	U	CCF106-4	
	c)	Find the distance between the two parallel lines $3x-2y+26=0$ and $3x-2y+11=0$	R	CCF106-2	
20	d)	the line $4x+3y+28=0$ . What is the conclusion?	R	CCF106-2	
y.	e),	$\frac{3x}{5} + \frac{2y}{7} = 11$ on both axes.	U	CCF106-2	
	f)	Find out which of the following circles is bigger. $x^2 + y^2 - 4x - 2y - 35 = 0$ and $x^2 + y^2 - 4x - 14y + 28 = 0$	U	CCF106-3	
Q.2		Attempt any FOUR		7	(16)
	a)	Find the area of quadrilateral whose vertices are (1, 5),(8, 2),(11, 3),(4, 6)	A	CCF106-1	(16)
	b)	Find the equation of straight line passing though (5, 4), (3,-2). Also find slope and intercepts made by that line on both axes.	A	CCF106-2	
	c)	Find the equation of the perpendicular bisector of the join AB where A(3,-4) & B(-4,3)	A	CCF106-2	
	d)	Evaluate <sup>3</sup> √60 using Regula Falsi method, using 2 iterations.	A	CCF106-4	
	e)	Find a positive root of $f(x) = x^3 - 2x + 0.5$ using Bisection method, upto 3 iterations	A	CCF106-4	
	f)	Use Gauss Seidel method to solve the following simultaneous equations: $8x + 4y - 2z = 3$ , $2x - 6y + z = 15$ , $4x + 5y + 15z = 37$ up to 3 iteration.	A	CCF106-5	
				P.T.O	

Q.3		Attempt any FOUR			(16)
	a)	Show that the following circles touch each other $x^2 + y^2 + 4x - 12y + 4 = 0$ ; $x^2 + y^2 - 2x - 4y + 4 = 0$	U	CCF106-3	
	b)	Find the equation of circle which has its center at $(4, 3)$ and touches the line $5x-12y-10=0$	A	CCF106-3	
	c)	Solve by Jacobi's method (3 iterations only) 25x + 6y - z = 82; $6x + 15y + 5z = 75$ ; $x + 4y + 40z = 66$	A	CCF106-5	
	d)	Find approximate root of the equation $x^3 + x - 1 = 0$ by using bisection method (3 iteration only).	A	CCF106-4	
	e)	Find the root of the equation $2x - \log_{10} x = 7$ using Regula Falsi method (3 iterations).	A	CCF106-4	
	f)	Solve by Jacobi's method (Take 3 iterations) $2x + 20y - 3z = 19$ ; $3x - 3y + 25z = 22$ ; $15x + 2y + z = 18$	A	CCF106-5	
Q.4		Attempt any FOUR			(08)
	a)	If $f(x) = x^2 + x + 1$ then find $f(x-1)$ .	R	CCF106-3	
	b)	Show that $f(x) = x^4 + 2x^2 + \cos x$ is an even function.	U	CCF106-3	
	c)	Evaluate $\lim_{x \to 0} \frac{\sin 4x}{\tan 3x}$	R	CCF106-3	
	d)	Evaluate $\lim_{x \to 5} \frac{x^3 - 125}{x^2 - 3x - 10}$	R	CCF106-3	
	e)	Find $\frac{dy}{dx}$ , if $y = e^{2x} + \log_5 x + \log_7 7$	R	CCF106-4	
	f)	Find $\frac{dy}{dx}$ , if $y = e^{\sin x + \cos x}$	R	CCF106-4	
Q.5	+	Attempt any FOUR			(16)
	a)	If $f(x) = \frac{1}{1-x}$ show that $f\{f[f(x)]\} = x$	U	CCF106-3	
	b)	Evaluate $\lim_{x \to 1} \frac{\sqrt{3+x} - \sqrt{5-x}}{x^2 - 1}$	A	CCF106-3	
700	c)	Evaluate $\lim_{x \to \frac{\pi}{4}} \frac{\sin x - \cos x}{x - \frac{\pi}{4}}$	A	CCF106-3	
	d)	If $y = \sin^{-1} \left[ \frac{1 - x^2}{1 + x^2} \right]$ find $\frac{dy}{dx}$	A	CCF106-4	
	e)	If $y = x^x + (\cos x)^x$ find $\frac{dy}{dx}$	A	CCF106-4	
	f)	Find the equation of tangent and normal to the curve $y = x (2-x)$ at point (2,0)	A	CCF106-4	
Q.6		Attempt any FOUR			(16)
	a)	Find $\frac{dy}{dx}$ , if $\sin y = \log(x + y)$	A	CCF106-4	
	b)	Find $\frac{dy}{dx}$ , if $x = a[\cos t + t \sin t]$ and $y = a[\sin t - t \cos t]$	A	CCF106-4	
	c)	If $y = (\sin^{-1} x)^2$ prove that, $(1 - x^2) \frac{d^2 y}{dx^2} - x \cdot \frac{dy}{dx} - 2 = 0$	U	CCF106-4	
	d)	If $y = \tan^{-1} \left[ \frac{5x}{1 - 6x^2} \right]$ find $\frac{dy}{dx}$	A	CCF106-4	
	e)	dx	A	CCF106-4	
	f)	Find the maximum and minimum value of $x^3 - 18x^2 + 96x$ ************************************	A	CCF106-4

LEVEL: - FIFTH

PROGRAM: IE & E & TC

COURSE CODE :- IEE/ETE508 / IX404

COURSE NAME: INDUSTRIAL ORGANIZATION & MANAGEMENT

MAX. MARKS: 80 TIME: 3 HRS. DATE: - 23/11/2017

#### Instruction :-

- 1) Answer to two sections must be written in separate section answer book provided.
- 2) Figure to the right indicate marks.
- 3) Illustrate your answers with sketches wherever necessary.
- 4) Use of non-programmable pocket calculator is permissible.
- 5) Mathematical and other tables shall be made available on request.
- 6) Assume additional suitable data necessary.
- 7) Use of Mobile is strictly prohibited.

### Section - I

Marks

#### Q.1Attempt any FOUR

(80)

- a) Define Organization and Business.
- b) Write meaning of Agro based Industry.
- c) Define Administration and Management.
- d) Write the meaning of planning in Management.
- e) List any four types of partners.
- f) Define authority and responsibility.

#### O.2Attempt any FOUR

(16)

- a) Write advantages and disadvantages of Globalization with reference to India.
- b) List the types of business and explain any one type of business.
- c) Explain following industrial sectors i) Engineering Industry ii) Process Industry.
- d) Explain the levels of Management.
- e) List fourteen principle of Management. (Henry Fayol 14 principles)
- f) Describe "Scientific Management by F.W. Taylor".

#### Q.3Attempt any FOUR

(16)

- a) Explain following functions of Management. i) Organizing ii) Directing.
- b) List the types of organization and explain any one type.
- c) Explain Centralized and Decentralized departmentation.
- d) Write the meaning of partnership and explain partnership deed.
- e) Enlist any four differentiations between partnership and joint stock companies.
- f) Explain in brief how success of organization mainly depends on proper management.

RTO

	Section – II	Marks
Q.4	Attempt any FOUR	(08)
	a) Define the term 'Accident'.	
	b) State the importance of safety.	
	c) What is working capital?	
	d) Enlist various types of taxes.	
	e) Define the term "inventory'.	
	f) State the objectives of JIT.	
Q.5	Attempt any FOUR	(16)
	a) What is Maslow's theory of motivation?	
	b) Write provisions under factory act.	
	c) Describe the working of personnel department.	
	d) What you know about E ST act?	
	e) Describe various types of budgets.	
	f) Enlist the functions of financial management.	
Q.6	Attempt any FOUR	(16)
	a) Describe various sources of raising capital.	
	b) Describe various steps in purchasing.	
	c) What you know about SAP?	
Mile-III.	d) Describe break even analysis.	
	e) Write about 5's' technique.	
	f) What is quality circle? State its advantages.	
	******

- 1) Answer to each section must be written in separate answer book.
- 2) Illustrate your answers with sketches where ever necessary.
- 3) Use of non-programmable pocket calculator is permissible.
- 4) Mathematical and other tables will be made available on request.
- 5) Assume and mention suitable additional data necessary.
- 6) Use of Mobile is strictly prohibited.
- 7) QN>Question No, SQN>Sub-Question No, R> Remembering, U>Understanding, A>Application CO>Course outcome

QN	N	Question Text	R U A	Co	Mar ks	
Q.1	_	Attempt any FOUR			(08)	
	(a)	Give any two specifications of transistors.		3	,	
	b)	Define function of filter? List any two filters?		3	A.M. A	
	(c)	Define  i) PIV  ii) Ripple factor	R	2		
	d)	Compare Si and Ge PN junction diode by sketching forward characteristics.	U	1		
	(e)	What is doping? State any two pentavalent impurities.	R	1		
0.5	f)	List any two application of zener diode.	R	1		
Q.2		Attempt any FOUR			(16)	
	a)	Explain working of bridge rectifier with $\pi$ filter.	U	2		
	b)	Explain following breakdown in zener diode.  i) Avalanche breakdown  ii) Zener breakdown	U	1		
	c)	Explain the concept of P-type and N-type extrinsic semiconductor with example.	U	1		
	d)	Draw output characteristics of CE configuration in transistor and show all regions.	U	3		
	e)	What is $\alpha$ (alpha)? Derive relation for $\beta$ in terms of $\alpha$	U	3		
Q.3	f)	Compare full wave center tapped and bridge rectifier for following points.  i) Ripple factor ii) Efficiency iii) PIV iv) DC output voltage.  Attempt any FOUR	U	2		
_	a)	Explain the working of full wave rectifier with input and output			(16)	
		waveforms.	U	2		
		Compare the insulators, semiconductors and conductors using energy band diagram.	U	1		
	c)	Draw practical set up for finding forward characteristics of PN junction diode and explain it.		1		

	d)	If $\beta$ of transistor is 100 and collector current is 50mA. Calculate the	A	3	
		value base current.			
	e)	Explain the working of transistor as a switch.	A	3	
	f)	Draw the output of following circuit.  Ac O RA Vont	A	2	
Q.4		Attempt any FOUR			(08)
	a)	State the need of biasing	R	4	
	b)	Show Q point on dc load line in active region.	U	4	
	c)	List two advantages of voltages divider bias circuit over the other biasing methods.	R	4	
	d)	List important parameters of JFET.	R	5	
	e)	Give any four specifications of FET.	R	5	
	f)	Show the pinout of LM317	R	5	
Q.5		Attempt any FOUR			(16)
	a)	Relate stability factor with $\beta$ , $I_C$ , & $V_{BE}$ & why $\beta$ should not be less than 1.		Anna an	
	b)	Draw the circuit diagram of transistor as a switch. Describe its operation.	U	4	
	c)	Construct P-channel JFET & explain it in detail.	A	5	
	d)	Compare JFET with BJT (8 points)	U	5	
	e)	Identify the following diagram & explain each block in detail.	A	6	
	f)	AC Tronsformer Filter Voltage Regulator & load			
06	1)	Explain how zener diode can be used as a voltage regulator?	U	6	
Q.6	3)	Attempt any FOUR  Construct fixed bigs with amitten register & combin it			(16)
	a) b)	Construct fixed bias with emitter resistor & explain it.	A	4	
	c)	Draw a single stage CE amplifier with neat labeled diagram.  Develop the relation between µ, rd & gm	U	4	
	d)	What is mean by MOSFT? With neat diagram explain n-channel	A	5	
		enhancement MOSFET.	U	5	
	e)	Construct & explain transistor shunt voltage regulator.	A	6	
	f)	Select the regulator IC for 12V regulated output voltage & draw the regulated power supply using this IC	A	6	

(An Autonomous Institute of Govt. of Maharashtra)

# ODD TERM END EXAM NOV/DEC -2017

EXAM SEAT NO. LEVEL: FOURTH PROGRAM: IE /E&TC COURSE CODE: IEE/ETE401/IX/EJ211 COURSE NAME: POWER ELECTRONICS -I MAX. MARKS: 80 TIME: 3 HRS. DATE: 29/11/2017 Instruction:-1) Answer to two sections must be written in separate section answer book provided. 2) Figure to the right indicates marks. 3) Illustrate your answers with sketches wherever necessary. 4) Use of non-programmable pocket calculator is permissible. 5) Mathematical and other tables shall be made available on request. 6) Assume additional suitable data necessary. 7) Use of Mobile is strictly prohibited. Section – I Marks 0.1 Attempt any FOUR (08)a) Draw circuit diagram of class F commutation. b) List different methods of commutation. c) State the need of high power semiconductor switches. d) List any two advantages of gate triggering. e) Draw symbol of i) DIAC ii) PUT f) State different methods of SCR triggering. Q.2 Attempt any FOUR (16)a) With neat circuit diagram explain operating principle of UJT relaxation oscillator. b) Draw & explain V-I characteristics of UJT. c) Compare class A & class B commutation. (any four points) d) Draw a neat labeled V-I characteristics of SCR. Also define i) Latching current ii) Holding current. Describe  $\frac{dv}{dt}$  triggering method. f) Compare UJT & PUT (any four points) Q.3Attempt any FOUR (16)a) Draw layer diagram of TRIAC & write operating principle of it. b) Draw & explain characteristics of power transistor.

- c) Draw & explain class C commutation.
- d) Explain voltage triggering method of SCR.
- e) Draw & explain characteristics of DIAC.
- f) With neat circuit diagram explain how DIAC is used to trigger TRIAC?

### Q.4 Attempt any FOUR

- a) Give the two necessities of each:
  - i) Series connection of SCR.
  - ii) Parallel connection of SCR.
- b) Draw vector diagram of line voltage and phase voltage.
- c) Give the use of freewheeling diode.
- d) Define derating factor. Give its equation.
- e) Draw the diagram of 3-phase delta-star type of transformer.
- f) Define controlled rectifier.

### Q.5 Attempt any FOUR

(16)

- a) Explain the causes of unequal current sharing. (any four points)
- b) Compare three phase uncontrolled half wave rectifier and bridge rectifier.

  (any four points)
- c) Explain with diagram and waveform single phase half wave controlled rectifier with freewheeling diode.
- d) Derive equation for static resistance.
- e) Draw a circuit diagram and waveform of 3-phase uncontrolled bridge rectifier.
- f) Explain the concept of two quadarant operation.

### Q.6 Attempt any FOUR

(16)

- a) Explain partial turn ON and partial turn OFF condition for SCRS.
- b) Define performance parameters of three phase full wave uncontrolled bridge rectifier.
  - a) Efficiency
  - b) Ripple factor
  - c) PIV
  - d) TUF
- c) Explain with circuit diagram and waveform of single phase half wave controlled rectifier with RL load.
- d) Derive equation for  $f_{max}$  in dynamic equalisation network.
- e) Give the advantages of three phase uncontrolled rectifier. ( any four points)
- f) Draw and explain waveforms of single phase half wave controlled rectifier using inductive load.

(An Autonomous Institute of Govt. of Maharashtra)

QN	Q N		RU	Co CCF105-	Mai
Q.1		Attempt any FOUR	A .	CCF 103-	ks
-	a)	$\begin{vmatrix} 1 & x & x^2 \end{vmatrix}$	R	1	(08)
	b)	$r^2 = 1$	U	1	
	c)	If $A = \begin{bmatrix} 3 & 2 \\ 1 & -1 \\ 0 & 4 \end{bmatrix}$ , $B = \begin{bmatrix} -1 & -1 \\ 3 & 2 \\ 4 & -2 \end{bmatrix}$ , verify that A+B=B+A	U	3	
	d)	If $\begin{bmatrix} 1 & 3 \\ 2 & 4 \end{bmatrix}$ , $B = \begin{bmatrix} 2 & -1 \\ 3 & 2 \end{bmatrix}$ verify that $(A+B)' = A' + B'$	U	3	
	e)	If $\begin{bmatrix} 7 & 0 & 2 \\ 1 & 2 & 6 \\ 4 & 5 & 3 \end{bmatrix}$ , find whether matrix A is singular or non singular.	R	3	
	f)	If $A = \begin{bmatrix} 3 & -1 \\ 2 & 4 \end{bmatrix}$ , $B = \begin{bmatrix} 1 & 2 \\ -3 & 0 \end{bmatrix}$ , find X such that $2X+3A-4B = I$	A	3	
Q.2		Attempt any FOUR			(16)
	a)	The voltages in an electric circuit are related by following equation. $v_1 + v_2 + v_3 = 9$ ; $v_1 - v_2 + v_3 = 3$ ; $v_1 + v_2 - v_3 = 1$ . Find $v_1, v_2 & v_3$	A	1	(20)
	b)	Solve the equations: $x+2y+3z=1$ , $2x+3y+2z=2$ & $3x+2y+4z=1$ , by using matrix inversion method.	A	3	***************************************
	c)	Resolve into partial fractions: $\frac{x-5}{x^3 + x^2 - 6x}$	A	2	
	d)	If $\left\{ \begin{bmatrix} 3 & 1 \\ 4 & 0 \\ 3 - 3 \end{bmatrix} - 2 \begin{bmatrix} 0 & 2 \\ -2 & 3 \\ -5 & 4 \end{bmatrix} \right\} \begin{bmatrix} -1 \\ 2 \end{bmatrix} = \begin{bmatrix} x \\ y \\ z \end{bmatrix}$ , find x, y, z.	A	3	
	e)	Resolve into partial fractions: $\frac{x^2 + 23x}{(x+3)(x^2+1)}$	A	2	
	f)	Expand using Binomial Theorem $\left(3a - \frac{8}{b}\right)^7$	A	4	

Q.3		Attempt any FOUR	_	1	(16)	
	a)	Solve by Cramer's Rule: $x + y = 3$ , $y + z = 5$ , $z + x = 4$	A	1	-	
	b)	Find inverse of matrix, $\begin{bmatrix} 3 & -3 & 4 \\ 2 & -3 & 4 \\ 0 & -1 & 1 \end{bmatrix}$	A	3		
	c)	Resolve into partial fractions : $\frac{2x+1}{x^2.(x+1)}$	A	2		
	d)	If $A = \begin{bmatrix} 0 & 1 - 1 \\ 3 - 2 & 3 \\ 2 - 2 & 3 \end{bmatrix}$ , show that $A^2 = I$	U	3		
	e)	Resolve into partial fractions: $\frac{x^3}{x^2-1}$	A	2		
	f)	Show that $(\sqrt{3} + 1)^5 - (\sqrt{3} - 1)^5 = 152$	U	4		
Q.4		Attempt any FOUR			(08)	
	a)	Express the following angles in radian measures.  i) 75°  ii) -270°	R/ U	5		
	b)	Evaluate without using calculator $\frac{\tan 85^{\circ} - \tan 40^{\circ}}{1 + \tan 85^{\circ} \tan 40^{\circ}}$	R/ U	5		
	c)	Prove that $\sin\left(\theta + \frac{\pi}{6}\right) - \sin\left(\theta - \frac{\pi}{6}\right) = \cos\theta$	U	5		
	d)	If sinA=0.4 find cos2A using multiple angle formula.	R/ U	5		
	e)	Prove that $\cos ec^2\theta - \cos^2\theta . \cos ec^2\theta = 1$	R/ U	5		
	f)	Find the value of $\sin \left[\cos^{-1}\left(-\frac{1}{2}\right)\right]$	R/ U	5		
Q.5		Attempt any FOUR			(16	
	a)	The difference between two acute angles of a right angled triangle is $\frac{2\pi^c}{5}$ . find the angles in degrees	U/ A	5		
	b)	3	U/ A	5		
	(c)	Prove that $\frac{\sin 4\theta + \sin 2\theta}{1 + \cos 2\theta + \cos 4\theta} = \tan 2\theta$	U	5		
-	d)	Prove that $cos(A + B) = cos A cos B - sin A sin B$	U/ A	5		
	e)	$\cos 3x - \cos 3x$	U/ A	5		
	f)	Show that $\cos^{-1}\left(\frac{4}{5}\right) + \tan^{1}\left(\frac{3}{5}\right) = \tan^{1}\left(\frac{27}{11}\right)$	A	5		
Q.6		Attempt any FOUR  8 The state of the state o	TT/		(16	
	a)	If $\tan(x+y) = \frac{3}{4}$ and $\tan(x-y) = \frac{8}{15}$ Then show that $\tan(2x) = \frac{77}{36}$	U/ A	5		
	b)	4	U/ A U/	5		
	c)	sin A - cos A	A	5		
	d)	$-\sin A + \sin 2A + \sin 3A + \sin 4A$ (5A)	U/ A	5		
	e)	(1-x)	U/ A	5		
	f)	Show that $\tan^{-1}\left(\frac{1}{7}\right) + \tan^{-1}\left(\frac{1}{13}\right) = \tan^{-1}\left(\frac{2}{9}\right) = \cot^{-1}\left(\frac{9}{2}\right)$	A	5

MAX. MARKS: 80 TIME: 3 HRS. DATE: 12/12/2017

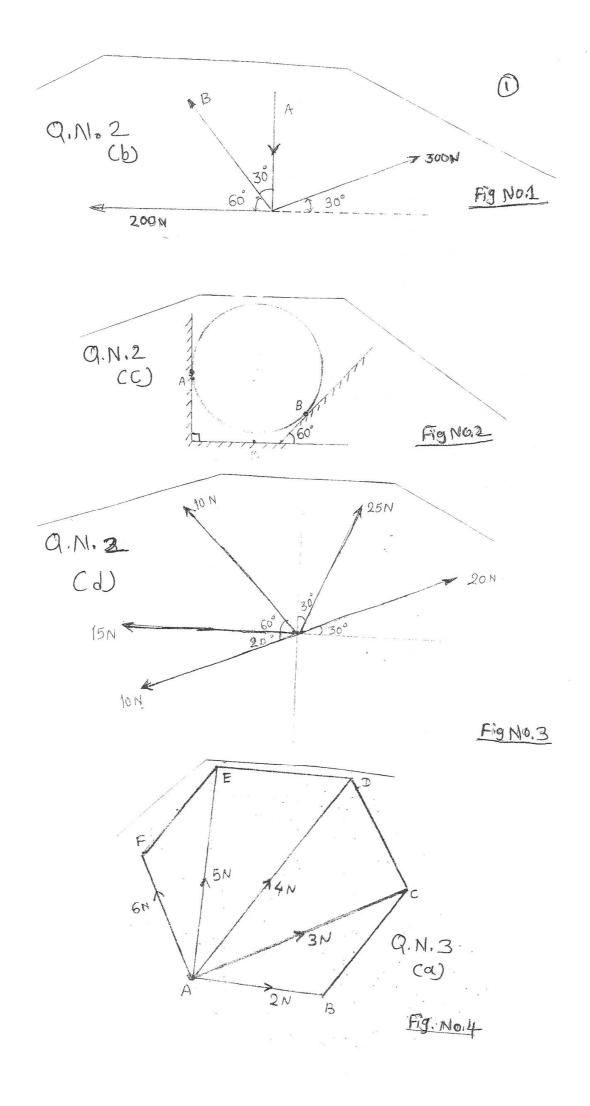

- 1) Answers must be written in the main answer book provided.( and supplements if required)
- 2) Illustrate your answers with sketches wherever necessary.
- 3) Use of non-programmable pocket calculator is permissible.
- 4) Mathematical and other tables shall be made available on request.
- 5) Assume and mention suitable additional data if necessary.
- 6) Use of Mobile is strictly prohibited.
- 7) QN > Question No.. SQN> Question No. R> Remembering, U> Understanding, A> Application.

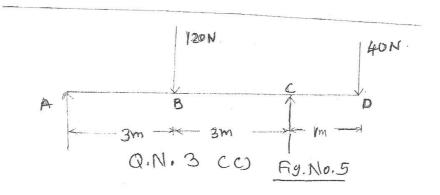

QN	S Q N	Question Text	R/ U/	Cod e CCF110	Marks
Q.1		Attempt any FOUR	A		00
	a)	Differentiate between weight and mass.	U	1	08
	b)	Define force system and enlist any four types of force systems.	R	1 1	-
	c)	Define composition of forces.	R	1	
	d)	State Lami's theorem.	R	2	-
	e)	State any two advantages and any two limitations of graphical methods.	R	3	
	f)	Define friction.	R	3	
2.2		Attempt any FOUR			16
	a)	Two forces 6 KN and 8 KN acting on a particle and their lines of action are inclined to each other at an angle of 70°. Determine the resultant force & its inclination.	A	1	10
	b)	Determine the forces A & B. Shown in Figure No.1. If resultant of this concurrent force system is zero.	A	2	
To the state of th	c)	A smooth sphere weighing 500 N is resting in a trough as shown in Figure No.2. Determine the reactions at points of contact A & B.	A	2	
	d)	Determine graphically the resultant of concurrent force system shown in figure No.3.	U	3	
	e)	A block weighing 500 N is resting on a plane inclined at 30° with the horizontal. Determine the force P that can be applied on the block at an angle of 10° to the inclined plane so that the block is just on the point of moving up the plane. Take coefficient of friction between body and inclined plane is 0.22.	A	2	

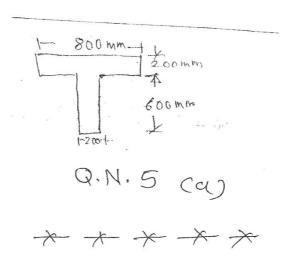

QN	S Q N	Question Text	R/ U/ A	Code CCF110	Marks
V. All the Management	f)	A wooden block is resting on a rough inclined plane whose inclination to the horizontal is 10 <sup>0</sup> . The smallest force acting parallel to the inclined plane is 2 N due to which block moves down the plane. If the coefficient of friction between block and plane is 0.32. Determine the weight of the block.	A	2	
Q.3		Attempt any TWO			16
	a)	Forces 2N, 3N, 4N, 5N & 6N acts at one of the angular point of a regular hexagon towards the other five angular points taken in order. Find the resultant of the system. Refer Figure No.4	A	2	
	b)	<ul> <li>i) A beam of 6m in span is simply supported at the ends. It carries a point load of 8 KN at the distance 2 m from the left hand support and a concentrated clockwise moment of intensity 10KN.m. at a distance 2 m from right hand support and u.d.l. of intensity 5 KN/m over the distance 4 m from the left hand support. Calculate reactions at the end supports analytically.</li> <li>ii) One end of a uniform ladder weighing 30 N rests against a smooth wall and the other end on a rough horizontal floor, coefficient of friction being 0.24. Find the inclination of</li> </ul>	A	2	
		ladder to the horizontal when it is on the point of slipping.			
N. C. State Control of the Control o	c)	A beam is as shown in Figure No. 5. Find support reaction graphically.	U	3	
() 1	ļ	TOUR TOUR			
Q.4	0)	Attempt any FOUR	-		08
The second section is a second section of the second section of the second section section section section sec	a)	State the position of $\overline{X} \& \overline{Y}$ for a triangle having 'B' as base and 'H' as height.	R	4	
	b)	Locate the centriod of semi circle of radius 'R'.	A	4	
TO THE ARREST AND AND AND	c)	State any two equations of motion under gravity with meaning of them.	R	5	
The same and the s	d)	Differentiate between distance and displacement.	U	5	
E. C. C. State and particular of	e)	Define angular motion and give 5.1 unit of angular velocity.	R	5	
The party flux of the county	<u>f)</u>	Define Ideal Machine.	R	6	
Q.5		Attempt any FOUR			16
1 - 1 - should be have drawn	a)	Locate the position of centriod for T-beam as shown in figure.	A	4	10
14. The read of Schoolsen	b)	From a solid cylinder 300mm diameter and 600mm height a co-axial cylinder of 100mm diameter is 200mm height is cut off from the top locate the center of gravity (C.G) with respect to bottom.	A	4	
No. of the Control of the Control	c)	A body is projected vertically upward from a height of 25m above the ground calculate the time required for the body to reach the ground take initial velocity $\mu = 20$ m/s.	A	5	

	A CONTROL OF ALL PROPERTY OF A CONTROL OF A			
(d)	when it strikes the ground.	A	5	
(e)		A	5	
f)	A turbine runs at 3000rpm. It is brought to rest in i) 30 min and ii) 300 revolutions. Calculate the retardation in rad / S <sup>2</sup> in each Phase.	A	5	
2.6	Attempt any FOUR	<u> </u>		
a)		R	5	16
b)	In a differential axle & wheel machine which has velocity ratio is 10 & a load of 12 KN is lifted by an effort of 2KN then determine efficiency of machine and state type of machine reversible or non-reversible.	A	6	
c)	Draw the nature of graph for a lifting machine  i) Load Vs effect ii) Load Vs ideal effect iii) Load Vs MA  iv) Load Vs effect cost in friction.	U	6	
d)	An body of mass of 10kg is moving with velocity of 100 m/s at height of 150m from ground find the total energy passed the body.	A	5	
(e)	of 20m by mean of pump of 3.0 KW power and efficiency is 75%?	A	5	
f)	An oil tank of 10m diameter and height 5m has its bottom 6m above the ground. Determine the work done in lifting this tank.	A	5

# ODD TERM END EXAM NOV/DEC

- ZIGH EMANT NOVID	EC -2017	
EXAM SEAT NO.		

LEVEL: THIRD PROGRAM: IE / E&TC

COURSE CODE: ETE308/IEE308/EJ112 COURSE NAME: CIRCUITS & NETWORK

MAX. MARKS: 80 TIME: 3 HRS.

#### Instruction:-

- 1) Answers must be written in the main answer book provided. (and supplements if required)
- 2) Figure to the right indicates marks.
- 3) Illustrate your answers with sketches wherever necessary.
- 4) Use of non-programmable pocket calculator is permissible.
- 5) Mathematical and other tables shall be made available on request.
- 6) Assume additional suitable data necessary.
- 7) Use of Mobile is strictly prohibited.

#### Q.1 Attempt any FOUR

Marks (08)

- a) Define the terms i) Electric Current, ii) Resistance.
- b) State the voltage divider rule.
- c) Define Power & state ohm's law.
- d) Convert practical current source of 4A current and  $45\Omega$  resistance into practical voltage source. Draw its diagram
- e) State the Norton's theorem.
- f) State the condition for maximum power to be transferred to the load and write formula for maximum power.

#### **Q.2** Attempt any FOUR

(16)

- a) State and explain Kirchhoff's laws.
- b) Find the voltage across each resistances for the circuit shown in fig. 1.
- c) How practical voltage source can be transformed into practical current source ? explain.
- d) Find the current through  $7\Omega$  resistor as shown in **fig. 2** using mesh analysis.
- e) State and explain Thevenin's theorem.
- f) Find the current  $I_L$  through terminals A-B for the circuit shown in fig.3 using Norton's theorem.

#### Q.3 Attempt any FOUR

(16)

- a) Find current in  $9\Omega$  resistor shown in fig.4.
- b) State and explain concept of open circuit and short circuit.
- c) Find current in different branches using Nodal Analysis. (Fig.5)

(P.T.O.)

- d) If three resistances  $5\Omega$ ,  $12\Omega$ ,  $19\Omega$  find the equivalent resistance if they are connected in series and if they are connected in parallel, also draw the diagrams.
- e) Find current in  $1\Omega$  resistor in the circuit shown in **fig.6** using superposition theorem.
- f) Find the equivalent circuit for the circuit shown in fig.7.

## Q.4 Attempt any FOUR

(08)

- a) Define time constant. Write equation of time constant for capacitor.
- b) Determine reactance of capacitor in given fig.8.
- c) Draw a circuit diagram of series resonant.
- d) Define quality factor & write its formula of resonant circuit.
- e) Draw a circuit diagram & frequency response of R-L low pass filter.
- f) Define concept of decibel.

## Q.5 Attempt any FOUR

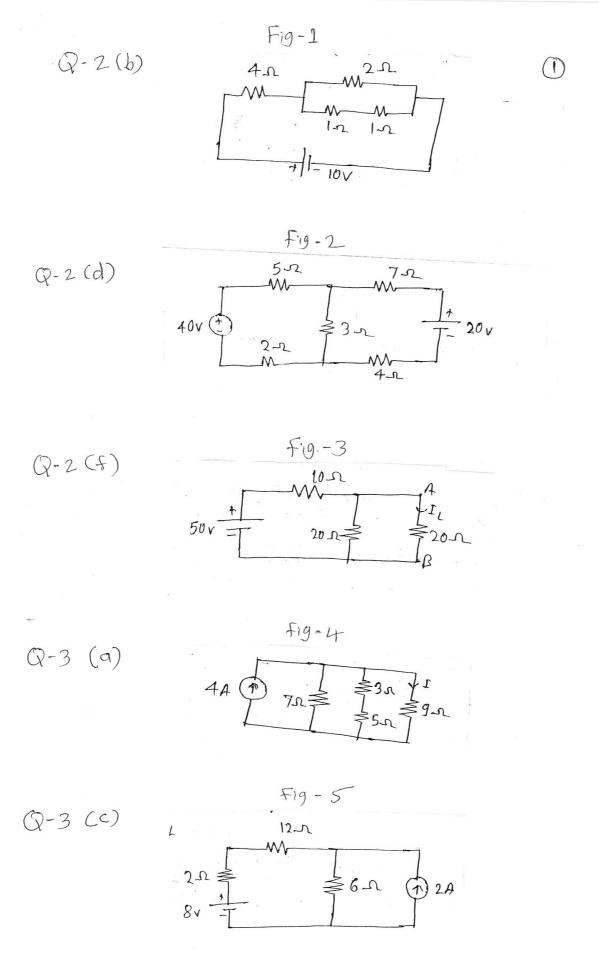

(16)

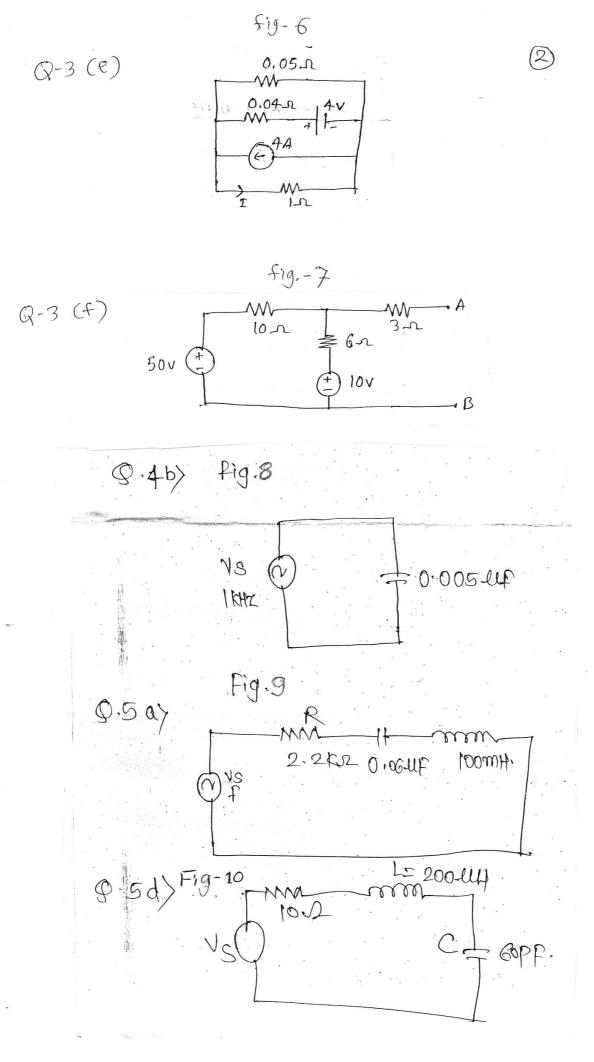

- a) For each of the following input frequencies, find the impedance in rectangle & polar form for the fig.9. i)  $F = 4 \text{ KH}_Z$ , ii)  $F = 2 \text{ KH}_Z$ .
- b) Compare R-L & R-C circuits. (any four)
- c) Derive formula for series resonant frequency.
- d) Calculate resonant frequency, quality factor & bandwidth in Fig.10.
- e) Draw & explain circuit diagram & frequency response of parallel resonant band stop filter.
- f) Explain with diagram 3 dB frequency & roll off rate.

## Q.6 Attempt any FOUR

(16)

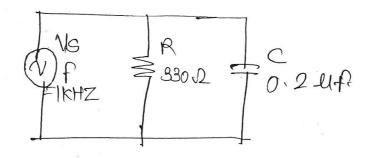

- a) Derive the formula for inductive reactance.
- b) Determine the admittance in Fig.11.
- c) Find the current & voltage across each element in fig.12, express each quantity in polar form & draw a complete voltage phasor diagram.
- d) Draw & explain circuit diagram & frequency response series resonant band pass filter.
- e) Explain RC low pass & RC high pass filter with diagram & frequency response.
- f) Explain with diagram parallel resonant band pass filter, also draw its frequency response.

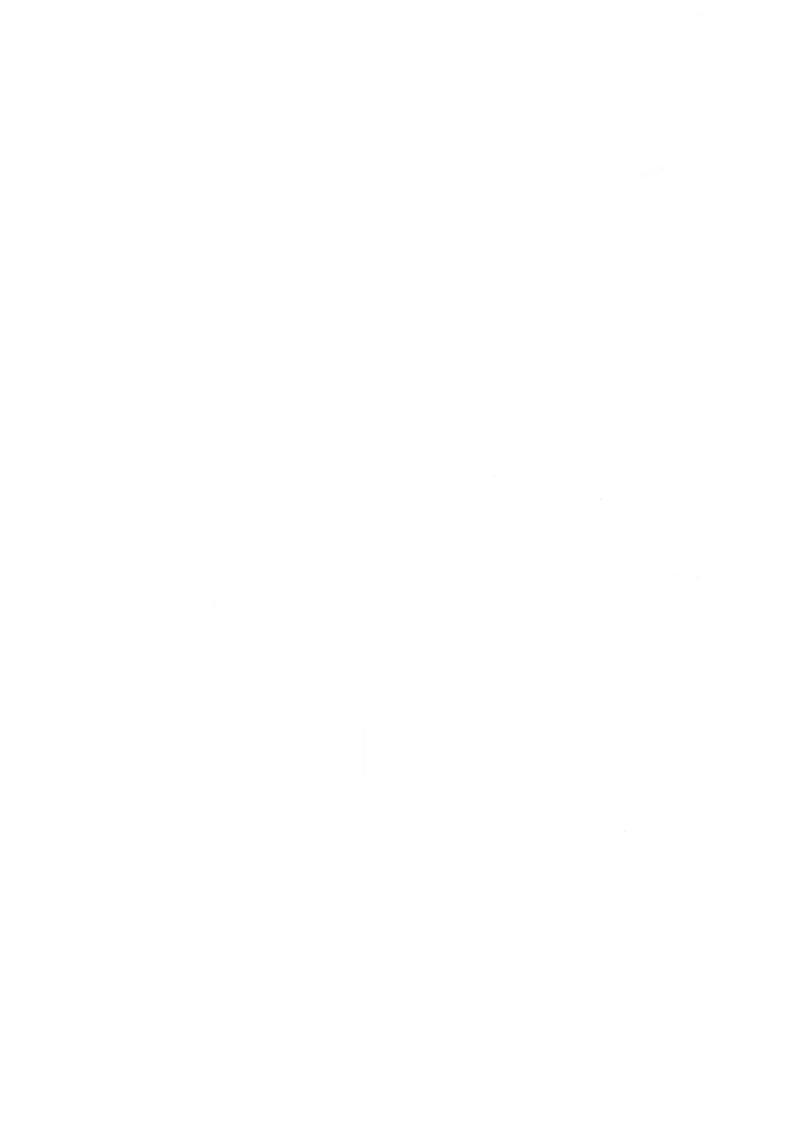

3

9-66) Pig 11

(9.6 c) Fig-12  $V_{s=1060}$  (v)  $V_{s=1060}$   $V_{s=1060}$   $V_{s=1060}$   $V_{s=1060}$   $V_{s=1060}$   $V_{s=1060}$   $V_{s=1060}$ 

(An Autonomous Institute of Govt. Of Maharashtra)

## ODD TERM END EXAM NOV. / DEC. 2017

EXAM SEAT NO.

LEVEL: - FOURTH

PROGRAM: INDUSTRIAL ELECTRONICS

COURSE CODE:- IEE501 / IX301

COURSE NAME: - POWER ELECTRONICS -II

MAX. MARKS: 80 TIME: 3 HRS. DATE: 13 / 12/2017

#### Instruction :-

- 1) Answer to two sections must be written in separate section answer book provided.
- 2) Figure to the right indicate marks.
- 3) Illustrate your answers with sketches wherever necessary.
- 4) Use of non-programmable pocket calculator is permissible.
- 5) Mathematical and other tables shall be made available on request.
- 6) Assume additional suitable data necessary.
- 7) Use of Mobile is strictly prohibited.

Section – I

Marks

### Q.1 Attempt any FOUR

(08)

- a) Draw symbols of i) GTO ii) IGBT.
- b) Give classification of chopper.
- c) State need of ac voltage regulator.
- d) List any two applications of IGBT.
- e) What is function of cyclo-converters?
- f) Draw block diagram of SMPS & label it.

#### Q.2 Attempt any **FOUR**

(16)

- a) Draw labeled layer diagram of n-channel IGBT. Draw its output characteristics.
- b) With the help neat circuit diagram and necessary waveforms explain class C chopper.
- c) Explain servo type regulator with neat circuit diagram.
- d) Draw and explain working of 1-φ to 1φ cycloconverter.
- e) Explain power supply requirements.
- f) Describe Jone's chopper with waveforms.

### Q.3 Attempt any TWO

(16)

- a) Draw and explain operation of 3-φ to 1φ cycloconverter and 3-φ to 3-φ cycloconverter.
- b) i) Draw constructional diagram of GTO. Describe its operating principle.
  - ii) List four applications of power MOSFET. Why thermal run away does not takes place in power MOSFET?
- c) i) Explain solid state type regulator with neat circuit diagram.
  - ii) Explain operating principle of resonant type regulator with neat circuit diagram.

	Section – II	Marks
Q.4	Attempt any FOUR	(08)
	a) Classify Inverter.	
	b) Give two functions of snubber circuit.	
	c) What is need of UPS? Explain in short.	
	d) Draw simple bridge inverter with R load.	
	e) Define annealing.	
	f) Give two specifications of inverter.	
Q.5	Attempt any FOUR	(16)
	a) Explain bridge inverter with McMurray commutator.	
	b) Give any four specifications of UPS.	
	c) How we can protect our circuit from i) Over current ii) Over voltage?	
	d) Classify Inverter on the basis of commutation. Explain any one of them.	
	e) Explain isolation circuit using pulse transformer.	
	f) Draw and explain waveforms of parallel inverter with RL load.	
Q.6	Attempt any FOUR	(16)
	a) What is resonant inverter? Explain the concept of zero voltage switching.	
	b) Draw block diagram of UPS & explain each block.	
465-	c) With the help of neat diagram, explain the operation principle of snubber ci	rcuit.
	d) How harmonics are controlled using PWN inverter?	
	e) Compare line interactive UPS and Online UPS. (four points)	
	f) Explain in brief i) Circuit breaker ii) Spike suppresser.	
	*****	

(An Autonomous Institute of Govt. Of Maharashtra)

## ODD TERM END EXAM NOV. / DEC. 2017

EXAM SEAT NO.

LEVEL: - FOURTH

PROGRAM: IE & E& TC

COURSE CODE :- IEE/ ETE 404/IX/EJ303

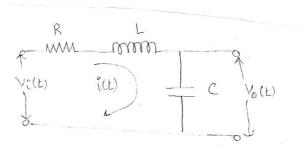

COURSE NAME: - PRINCIPLES OF CONTROL SYSTEMS MAX. MARKS: 80 TIME: 3 HRS. DATE: - 13 / 12/2017

Instruction :-

- 1) Answer to two sections must be written in separate section answer book provided.
- 2) Figure to the right indicate marks.
- 3) Illustrate your answers with sketches wherever necessary.
- 4) Use of non-programmable pocket calculator is permissible.
- 5) Mathematical and other tables shall be made available on request.
- 6) Assume additional suitable data necessary.
- 7) Use of Mobile is strictly prohibited.

	Section – I	Marks
Q.1	Attempt any FOUR	(08)

- a) Define the term order and type of system.
- b) What do you mean by poles and zeros of transfer function?
- c) State the need for standard test inputs.
- d) What is bode plot? Give its advantages.
- e) Define the terms :- Damping and damping ratio.
- f) Find the transfer function for given RLC circuit below.

## Q.2 Attempt any FOUR

(16)

- a) Draw and explain block diagram of open loop system.
- b) Derive equation for transfer function of generalized closed loop system.
- c) Draw the standard test signals used in time domain analysis and state the mathematical statement for each.
- d) State any four advantages and disadvantages of frequency domain analysis.
- e) Draw the Bode magnitude plot of the following system. ( Use semilog paper for plotting)

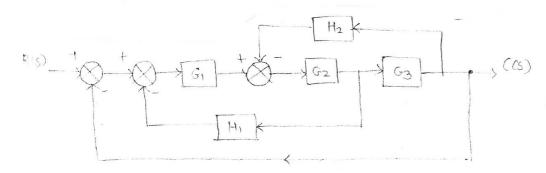

$$G(s) = \frac{100}{S(s+5)(s+20)}$$

f) Derive the equation for unit step response of 2<sup>nd</sup> order critically damped system. Draw the output response curve.

## Q.3 Attempt any **FOUR**

(16)

a) Find the single block equivalent by block diagram reduction technique.

b) The response of a control system after applying unit step input is  $C(t) = 1 + e^{-40t} - 2e^{-20t}$  Determine

- i) Natural frequency of oscillation Wn. ii) Damping Ratio
- iii) Settling time iv) closed loop transfer function.
- c) Explain the procedure to draw bode plot.
- d) What is meant by linear time varying and time invarying system? Give examples of each.
- e) The open loop transfer function of unity feedback control system is given by  $G(s) = \frac{25}{S(s+5)}$  obtain maximum overshoot, peak time, rise time and settling time.
- f) Define the following frequency domain specifications
  - i) Reasont Peak. ii) Reasonant Frequency. iii) Bandwidth. iv) cut-off rate.

	Section – II	Marks
Q.4	Attempt any FOUR	(08)

- a) Define servo system.
- b) State Routh stability criterion.
- c) List the modes of control actions.
- d) Draw the characteristics of DC servo motors.
- e) What is mean by conditionally stable system?
- f) List two applications of ON-OFF controller.

#### Attempt any FOUR Q.5

(16)

- a) Compare AC and DC servo systems (any four points)
- b) A unity feedback system is characterized by the open loop transfer function  $G(s) = \frac{K(s+13)}{S(s+3)(s+7)}$  using Routh's criterion. Calculate the range of values of K for the system to be stable.
- c) State the expression for proportional controller and define i) Proportional band ii) Offset.
- d) Compare DC servo motor and stepper motor. (any four points)
- e) Explain rules for the construction of the root locus.
- f) Explain process control system with neat diagram.

- a) Explain PID controller with electronic PID controller diagram. Give two application of it.
- b) i) Explain block diagram of servo system with neat diagram.
  - ii) Derive the transfer function of armature controlled DC servo motor.
- c) i) Explain the concept of marginal stability. Draw neat sketch to represent it on S-plane.
  - ii) Explain stable system and unstable system.

(An Autonomous Institute of Govt. Of Maharashtra)

# ODD TERM END EXAM NOV./ DEC. -2017

EXAM SEAT NO.

LEVEL: - SECOND

PROGRAM: INDUSTRIAL ELECTRONICS

COURSE CODE :- IE205

COURSE NAME :- ELECTRICAL ENGINEERING

MAX. MARKS: 80 TIME: 3 HRS. DATE:- 30/11/2017

### Instruction:-

- 1) Answers must be written in the main answer book provided.( and supplements if required)
- 2) Figure to the right indicate marks.
- 3) Illustrate your answers with sketches wherever necessary.
- 4) Use of non-programmable pocket calculator is permissible.
- 5) Mathematical and other tables shall be made available on request.
- 6) Assume additional suitable data necessary.
- 7) Use of Mobile is strictly prohibited.

Marks

#### 0.1 Attempt any FOUR

(80)

- a) Define Resistance and state its unit.
- b) State Kirchhoff's current law.
- c) Define mmf.
- d) State Faraday's First Law of electromagnetic induction.
- e) Define node.
- f) State maximum power transfer theorem.

#### O.2Attempt any FOUR

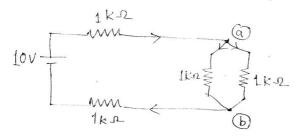

(16)

- a) Explain superposition theorem for the solution of electrical circuits.
- b) What is dynamically induced emf? Derive expression for the magnitude of dynamically induced emf.
- c) Find equivalent star for a delta network of resistance.
- d) State and explain Norton's theorem.
- e) Explain ideal constant voltage source and ideal constant current source.
- f) Compare series circuit with parallel circuit (any four point)

#### Q.3Attempt any TWO

(16)

- a) i) State and explain Faraday's law of electromagnetic induction. ii) Explain Lenz's Law.
- b) Verify Kirchhoff's current law (KCL) for the node points (a) and (b).

c) Explain in brief series RL circuit with step input voltage.

## Q.4 Attempt any FOUR

(08)

- a) Classify DC Motors.
- b) State any two applications of single phase Motors.
- c) Name any four parts of transformer.
- d) Define voltage Regulation related to transformers.
- e) Define i) Cycle ii) Frequency.
- f) State voltage and current Relation in star connection.

## Q.5 Attempt any FOUR

(16)

- a) State any four industrial applications of induction motors.
- b) Draw the neat diagram of three point starter. Explain in brief.
- c) Describe how a pulse transformer works in brief.
- d) Draw and explain three phase three wire system.
- e) Draw a sinusoidal quantity and label on it the cycle, periodic time & peak value and explain it.
- f) Define Reactance and impedance of R-L series circuit and state their units.

## Q.6 Attempt any FOUR

(16)

- a) Describe the need for starters for a.c. motors.
- b) A 230/115 volt single phase transformer supply a load of 900 watt at its output. Determine the efficiency if the iron losses are 15 watt and the total copper losses are 40 watt.
- c) Describe losses and efficiency in transformer.
- d) Derive the expression for a average power in purely resistive circuit.
- e) Describe briefly the working of the purely capacitive circuit connected across A.C. supply. Draw related phasor diagram and circuit diagram.
- f) Draw a labeled R-L-C series circuit and draw the phasor diagram showing the voltages across R, L and C the current and the total voltage applied.

(An Autonomous Institute of Govt. Of Maharashtra)

EXAM SEAT NO.	1			W. 1		,				177			
		_	-		$\cap$	N	AT	SE.	1	A 1	V	K	

LEVEL: - THIRD

PROGRAM: INDUSTRIAL ELECTRONICS

COURSE CODE:- IX307

COURSE NAME: INDUSTRIAL DRIVES

MAX. MARKS: 80 TIME: 3 HRS. DATE: - 30/11/2017

#### Instruction:-

- 1) Answer to two sections must be written in separate section answer book provided.
- 2) Figure to the right indicate marks.
- 3) Illustrate your answers with sketches wherever necessary.
- 4) Use of non-programmable pocket calculator is permissible.
- 5) Mathematical and other tables shall be made available on request.
- 6) Assume additional suitable data necessary.
- 7) Use of Mobile is strictly prohibited.

### Section - I

Marks

### Q.1 Attempt any FOUR

(08)

- a) State any two limitations of dc drives.
- b) List any two advantages of electrical drives.
- c) Enlist factors considered for drive selection.
- d) Draw speed Torque characteristics of DC shunt motor & label it.
- e) State different methods of speed control for induction motor.
- f) Give any two advantages of convertor fed induction motor.

## Q.2 Attempt any FOUR

(16)

- a) Draw and explain construction and working of synchronous motor.
- b) Explain working of squirrel cage rotor Induction motor in detail.
- c) Explain how stator current can be controlled to control the speed?
- d) Explain start mode and run mode of stator in detail.
- e) Give advantages and disadvantages of stator voltage control technique.
- f) How the frequency can be controlled of stator for speed control?

## Q.3 Attempt any **TWO**

(16)

- a) Explain in detail the speed control methods with necessary diagram
  - i) Stator voltage control method. ii) Frequency control method.
- b) Explain speed torque characteristics of i) DC series motor. ii) DC compound motor.
- c) Explain four quadrant operation of hoist with neat diagram.

#### Q.4 Attempt any FOUR

(08)

- a) What do you understand by motor coasting?
- b) Draw neat circuit diagram of three phases half wave converter drive.
- c) Write any two disadvantages of discrete drives.
- d) What are types of steel rolling mills? Define any one of them.
- e) Write any two requirements of motor used in drive for cement mills.
- f) What are different protections provided by the microprocessor based drive?

## Q.5 Attempt any FOUR

(16)

- a) What do you mean by class A chopper drive? Draw its circuit diagram and explain its working.
- b) With necessary diagram explain control strategies used in chopper.
- c) Differentiate between single phase semiconverter drive and single phase full converter drive.
- d) Explain in brief DC drive performance.
- e) Explain different stages in sugar mills.
- f) With neat diagram explain phase locked loop control in DC drives.

### Q.6 Attempt any TWO

(16)

- a) With neat diagram explain multiphase chopper drive working. Also draw necessary waveforms.
- b) What do you mean by circulating current mode and non circulating current mode of dual converter? Also explain with neat diagram speed reversal using dual converter
- c) List various stages in cement drive. Also explain various stages in paper mills.

(An Autonomous Institute of Govt. of Maharashtra)

PROGRAM: IE /E&TC

COURSE CODE: EIF302/ETE/IEE302/EJ202

COURSE NAME: APPLIED ELECTRONICS

MAX. MARKS: 80

TIME: 3 HRS.

DATE: 30/11/2017

#### Instruction:-

- 1) Answers must be written in the main answer book provided. (and supplements if required)
- 2) Illustrate your answers with sketches where ever necessary.
- 3) Use of non-programmable pocket calculator is permissible.
- 4) Mathematical and other tables will be made available on request.
- 5) Assume and mention suitable additional data necessary.
- 6) Use of Mobile is strictly prohibited.
- 7) QN>Question No, SQN>Sub-Question No, R> Remembering, U>Understanding, A>Application CO>Course outcome

QN	S Q N	Question Text	R U A	Co EIF 302-	Mar ks
Q.1		Attempt any FOUR			(08)
	a)	List effect of negative feedback on amplifier characteristics(any four)	U	1	
	b)	State two applications of sinusoidal oscillators.	R	1	
	c)	Define feedback. State types of feedback.	R	2	
	d)	State the need of power amplifier.	R	3	
	e)	Draw a neat diagram of crystal oscillator.	R	2	
	f)	Why heat sinks are used for power transistors in power amplifier circuits.	U	3	
Q.2		Attempt any FOUR			(16)
	a)	Compare positive & negative feedback.	U	1	
	b)	The overall gain of multistage amplifier is 140, when negative voltage feedback is applied, the gain is reduced to 17.5. Find the fraction of the output that is feedback to the input.	A	1	
	c)	Compare Hartley & colpitt's oscillator.	U	2	
	d)	With neat diagram explain frequency response of single tuned amplifier.	U	3	
	e)	Describe with neat circuit diagram complementry symmetry class B push pull amplifier	U	3	
	f)	Explain with neat circuit diagram working of class A transformer coupled power amplifier.	U	3	
Q.3		Attempt any FOUR			(16)
	a)	Compare class A & class B power amplifiers (any four points)	U	3	
	b)	Explain with neat diagram frequency response curve of double tunned circuit.	U	3	
	c)	Draw block diagram of current series & voltage series feedback.	R	1	

	(d)	Explain any four advantages of negative feedback.	U	2	
	e)	Draw & explain working of colpitts oscillator.	U	3	-
	f)	In Hartley oscillator, L <sub>1</sub> =2 mH, L <sub>2</sub> = 20 mH, C=1pf, Determine			
		required gain for oscillator & frequency of oscillation.	A	2	
Q.4		Attempt any FOUR			(08)
	a)	Draw switching waveforms of Astable multivibrator.	R	4	+ , ,
	b)	Define multivibrator.	R	4	
	(c)	Enlist the method of generating a time base signal.	R	5	
	d)	Define term sweep-error.	R	5	
	e)	Define – i) Positive clipper ii) Negative clipper			
	ļ		R	6	
0.5	f)	Draw response of high pass RC network to a square wave.	R	6	
Q.5		Attempt any FOUR			(16)
	a)	Differentiate astable multivibrator and monostable multivibrator	U	4	
		(any four points)		Т	
***************************************	b)	Determine the period and frequency of oscillation for an astable			
		multivibrator with component values $R_1 \!\!=\!\! 2~k\Omega;~R_2 \!\!=\! 20~k\Omega$ and	A	4	
		$C_1=0.01 \mu f; C_2=0.05 \mu f$			
	c)	Explain how sweep circuit can be built using transistor switch.	U	5	
	d)	Construct and explain sweep circuit using unijunction transistor		**************************************	
		switch.	A	5	
	e)	Explain positive clamper using diode with waveforms.	U	6	-
	f)	Sinusoidal waveform of 10 V peak-to-peak is applied to the circuit			
		shown in fig (a) sketch the waveform at the circuit output.	A	6	
Q.6		Attempt any FOUR			(16)
	a)	The input signal with waveform shown in fig (b) is applied to the			(10)
		clamper circuit shown in fig. (c). sketch the waveform of the output	A	6	
		voltage.			
	b)	A Sinusoidal waveforms of 10 V peak-to-peak is applied to the	A	(	
		circuit shown in fig. (d) Sketch the waveforms at the circuit output.	A	6	
	c)	Explain with diagram Bootstrap sweep generator.	U	5	
	d)	Explain with circuit diagram transistorized constant current sweep	TT		
		generator.	U	5	
	e)	A monostable multivibrator is required to convert a 100 KHz, 30%	A .		
		duty cycle square wave to a 100 KHz, 50% duty cycle square wave. Find the values of $R_3$ if $C_1$ =1 nf	A	4

(An Autonomous Institute of Govt. of Maharashtra)

# ODD TERM END EXAM NOV/DEC -2017

EXAM SEAT NO.

LEVEL: THIRD	
COURSE CODE:	IEE310
MAX. MARKS: 8	30

PROGRAM: INDUSTRIAL ELECTRONICS
COURSE NAME: ELECTRIC MACHINES

TIME: 3 HRS.

DATE: 23/11/2017

#### Instruction:-

- 1) Answers must be written in the main answer book provided. (and supplements if required)
- 2) Figure to the right indicates marks.
- 3) Illustrate your answers with sketches wherever necessary.
- 4) Use of non-programmable pocket calculator is permissible.
- 5) Mathematical and other tables shall be made available on request.
- 6) Assume additional suitable data necessary.
- 7) Use of Mobile is strictly prohibited.

### Q.1 Attempt any FOUR

Marks (08)

- a) What is meant by % voltage regulation of a 1 phase transformer?
- b) State classification of dc generator give any two typical applications of dc shunt generator.
- c) Which are the losses taking place in 1 phase transformer?
- d) What is meant by slip frequency emf induced in rotor of a 3 phase induction motor?
- e) State various type of spare parts used for HV distribution 3φ transformer.
- f) Draw suitable circuit diagram how to reverse the direction of dc shunt motor.

### Q.2 Attempt any FOUR

(16)

- a) Draw speed torque characteristics for dc shunt, series & compound motor & comment on it.
- b) Give reason why single phase transformer's core losses remain constant during loading up to full load condition.
- c) Explain the need of starter for 3 phase induction motor. Also state various starters used.
- d) Give applications two application of each for two types of d.c shunt and d.c series motor.
- e) Draw constructional diagram label each spare part of 3 phase induction motor.
- f) Draw 3 phase ring induction motor construction diagram, label each parts & explain its working operation briefly.

## Q.3 Attempt any FOUR

(16)

- a) Draw various types of circuit connection diagram for 3 phase transformer & their various types.
- b) Draw star delta starter & name their spare parts used for 3 phase induction motor.

- c) Explain in brief the production of rotating magnetic field by 3 phase supply in 3 phase winding.
- d) A dc shunt motor takes 72A at 230V & runs at 755rpm. The resistance of the armature is  $0.5\Omega$  & shunt field winding is  $115\Omega$ , if iron & frictional losses are 968W find i) Electrical power developed (Driving power) ii) copper losses iii) Break horse power iv) Armature torque.
- e) A 3 phase 4 pole, 400V, star connected induction motor draws a line current of 20 Amp at 0.866 lag. P.f. the stator resistance/ phase =0.5Ω. The rotor exerts a torque of 120NW-M making 16 revolution/ sec. The useful mechanical Output is 12000W calculate i) Efficiency ii) slip iii) stator iron loss.
- f) Explain back emf for dc motor & state its equation with details & the effect of back emf on speed of dc motor.

#### Q.4 Attempt any FOUR

(08)

- a) Write down any two applications of shaded pole induction motor.
- b) Define pitch factor related to alternator.
- c) What is meant by synchronous impedance of an alternator?
- d) State the working principle of permanent magnet stepper motor.
- e) Write down any two application of A.C servo motor.
- f) How alternators are classified according to the construction of rotors?

#### Q.5 Attempt any FOUR

(16)

- a) With neat diagram explain the working of capacitor start capacitor run single phase induction motor
- b) Explain how torque is produced in a shaded pole induction motor?
- c) Derive emf equation of 3 phase alternator.
- d) State the advantages of stationary armature in an alternator.
- e) Why terminal voltage in an alternator is not equal to the voltage generated in armature, explain?
- f) Explain the working of variable reluctance stepper motor with neat diagram.

#### Q.6 Attempt any FOUR

(16)

- a) Explain how A.C series motor works?
- b) Explain how torque is produced in repulsion motor?
- c) Find the no load line voltage of a star connected 4 pole alternator from the following.
  - i) Flux per pole=0.12wb
  - ii) Conductors per slot=4
  - iii) Slots per pole per phase=4
  - iv) Two layer winding with coil span= $150^{\circ}$  Assume  $K_d = 0.958$
- d) Explain how regulation of an alternator can be obtained with the help of synchronous impedance method?
- e) Explain working of permanent magnet stepper motor with two windings.
- f) Explain with neat diagram the working of drag cup servo motor.

# ODD TERM END EXAM NOV./ DEC. -2017

EVAM	SEAT NO.
LA AIVI	OF A INC.

LEVEL: - THIRD PROGRAM: ALLIED

COURSE CODE :- MEE312/IEE/ETE311/MTE311/MG227/R227 COURSE NAME :- NON CONVENTIONAL ENERGY SOURCES

MAX. MARKS: 80 TIME: 3 HRS. DATE: 24/11/2017

#### Instruction:-

- 1) Answers must be written in the main answer book provided.( and supplements if required)
- 2) Figure to the right indicate marks.
- 3) Illustrate your answers with sketches wherever necessary.
- 4) Use of non-programmable pocket calculator is permissible.
- 5) Mathematical and other tables shall be made available on request.
- 6) Assume additional suitable data necessary.
- 7) Use of Mobile is strictly prohibited.

Marks

#### Attempt any FOUR Q.1

(80)

- a) What do you meant by fossiel fuels?
- b) Define solar constant.
- c) State the merits of solar energy. ( any four)
- d) What are the causes of wind?
- e) State the advantages of wind energy. ( any four)
- f) What is biomass energy?

#### Q.2Attempt any FOUR

(16)

- a) Briefly explain the challenges to explore non conventional energy sources.
  - b) Explain briefly flat plate collector.
  - c) What are the various solar energy utilization methods?
  - d) Draw block diagram of control panel of wind energy system and explain it.
  - e) State the classifications of wind turbine? Explain any one in brief.
  - f) Explain various biomass types.

## Q.3 Attempt any **TWO**

(16)

- a) With neat sketch explain the working of sunshine recorder.
- b) What is the future of wind energy in India? Explain the environmental effects of wind energy.
- c) Explain with neat sketch the working of floating drum type biogas plant.

P.T.O.

#### Q.4 Attempt any FOUR

(08)

- a) State the four advantages of ocean energy.
- b) Enlist the basic components of a tidal power plant.
- c) State four limitations of geothermal energy.
- d) State four applications of fuel cell.
- c) State the objectives of energy conservation.
- f) Define i) ROI ii) Life cycle cost.

#### Q.5 Attempt any FOUR

(16)

- a) State the requirement for site selection of ocean thermal power plant.
- b) Draw a neat sketch of Dry steam system geothermal power plant and explain its working.
- c) Enlist the components of small mini hydroelectric plant and state the function of each component.
- d) Define energy management. Write four objectives of it.
- e) What is energy audit? Explain detailed energy audit methodology.
- f) State the ways of improving boiler efficiency.

#### Q.6 Attempt any FOUR

(16)

- a) Describe single basin tidal power plant.
- b) State the main components of fuel cell and the function of each component.
- c) State the principle of Magneto-hydro dynamic power generation. State is advantages.
- d) State the factors affecting site selection for geothermal power plant.
- e) Draw a neat sketch of gas turbine co-generation plant and explain its working.
- f) State four waste heat recovery devices. State advantages of waste heat utilization.

\*\*\*\*\*\*\*\*\*\*

(An Autonomous Institute of Govt. of Maharashtra)

## ODD TERM END EXAM NOV/DEC -2017

EXAM SEAT NO.

LEVEL: THIRD PROGRAM: IE / E&TC / IT

COURSE CODE: ETE/IEE312/IX/EJ210/ITE312 COURSE NAME: HIGHER MATHEMATICS

MAX. MARKS: 80 TIME: 3 HRS. DATE: 24

#### Instruction:-

- 1) Answers must be written in the main answer book provided. (and supplements if required)
- 2) Figure to the right indicates marks.
- 3) Illustrate your answers with sketches wherever necessary.
- 4) Use of non-programmable pocket calculator is permissible.
- 5) Mathematical and other tables shall be made available on request.
- 6) Assume additional suitable data necessary.
- 7) Use of Mobile is strictly prohibited.

## Q.1 Attempt any FOUR

Marks (08)

a) Find  $\frac{\partial u}{\partial v}$  if  $u = x^2 \sin(\frac{x}{v})$ 

- b) If  $u = xy f(\frac{y}{x})$  show that  $x \frac{du}{\partial x} + y \frac{\partial u}{\partial y} = 2u$
- c) If  $u = \log(x^2 + y^2)$  prove that  $\frac{\partial^2 u}{\partial x \partial y} = \frac{\partial^2 u}{\partial y \partial x}$
- d) Prove that  $\Delta \nabla = \Delta \nabla$
- e) Evaluate  $\Delta^2(x^2 + x)$
- f) If  $f(x) = x^2 2x + 1$  construct Newton's forward difference table for x=1,2,3

### Q.2 Attempt any FOUR

(16)

a) Using Lagrange's interpolation formula find f(2.5) for

			()
X	1	2	3
у	7	18	35

b) Find the missing term in the following table

X	0	1	2	3	4
У	1	3	9		8

c) The population of a town in decimal census is given below. Estimate the population for the year 1955

Year (x)	1921	1931	1941	1951	1961
Population(in	46	66	81	93	101
thousands)					

d) If 
$$u = x^3 \sin^{-1}(\frac{y}{x}) + x^4 \tan^{-1}(\frac{y}{x})$$
 find the value of  $x^2 \frac{\partial^2 y}{\partial x^2} + 2xy \frac{\partial^2 u}{\partial x \partial y} + y^2 \frac{\partial^2 u}{\partial y^2}$ 

e) If 
$$u = x^2 - y^2$$
,  $v = xy$  find  $\frac{\partial(u, v)}{\partial(x, y)}$ 

f) If  $x = r \cos \theta$ ,  $y = r \sin \theta$  prove that J.J' = 1

#### Q.3 Attempt any FOUR

(16)

- a) Express  $f(x) = x^4 2x^2 + 1$  in factorial form & hence find  $\Delta^2 f(x)$  at x = 0.5
- b) Using Newton's suitable interpolation formula, estimate f(42) from the following table

X	20	25	30	35	40	45
f(x)	354	332	291	260	231	204

c) Prove that 
$$\left(\frac{\Delta^2}{E}\right)e^x \cdot \frac{Ee^x}{\Delta^2 e^x} = e^x$$
  
d) If  $z = f(x + ay) + \phi(x - ay)$  show that  $\frac{\partial^2 z}{\partial y^2} = a^2 \frac{\partial^2 z}{\partial x^2}$   
e) If  $u = \tan^{-1}\left(\frac{x^3 + y^3}{x - y}\right)$  prove that  $x \frac{\partial u}{\partial x} + y \frac{\partial u}{\partial y} = \sin 2u$   
f) If  $u = (1 - 2xy + y^2)^{-1/2}$  prove that  $x \frac{\partial u}{\partial x} - y \frac{\partial u}{\partial y} = y^2 u^3$ 

(08)

- a) Evaluate  $L(\sin^2 3t)$
- b) Evaluate  $L\left(2+e^{-3t}+\cos 2t\right)$
- c) Evaluate  $L^{-1}\left(\frac{2}{s^3} \frac{1}{s+2}\right)$
- d) Evaluate  $L^{-1}\left[\frac{6}{(s+3)^4}\right]$
- e) Find the Fourier constant  $a_0$  for the function  $f(x) = \sqrt{1 \cos x}$  in  $(0, 2\pi)$
- f) Find the value of an (Fourier constant) for  $f(x) = \sin ax$ ,  $-\pi < x < \pi$

(16)

a) Evaluate 
$$L^{-1} \left[ \frac{1}{(s+2)^3} + \frac{s+7}{s^2 + 6s + 13} \right]$$

- b) Evaluate  $L^{-1} \left[ \frac{2s^2 1}{(s^2 + 1)(s^2 + 4)} \right]$
- c) Evaluate  $L|t^3.e^{-3t}|$
- d) Using convolution theorem, find  $L^{-1}\left[\frac{1}{s(s+1)^2}\right]$
- e) Find Laplace transform of  $te^{2t} \sin 3t$
- Solve using Laplace transform:  $\frac{dy}{dt} + 3y = 2 + e^{-t}$  given that y = 1 when t = 0

#### Q.6 Attempt any TWO

(16)

Find Fourier expansion of following function.

a) 
$$f(x) = \begin{cases} x, & 0 < x < 1 \\ 1 - x, & 1 < x < 2 \end{cases}$$

- b)  $f(x) = x x^2$ ,  $-\pi < x < \pi$  Hence deduce that  $\frac{\pi^2}{12} = \frac{1}{1^2} \frac{1}{2^2} + \frac{1}{3^2} \frac{1}{4^2} + \dots$
- c)  $f(x) = \sin x$ ,  $0 \le x \le \pi$ = 0,  $\pi \le x \le 2\pi$  Hence deduce that  $\frac{1}{2} = \frac{1}{1.3} + \frac{1}{3.5} + \frac{1}{5.7} + \cdots$

# ODD TERM END EXAM NOV. / DEC. 2017

<b>EXAM</b>	SEAT	NO I
TANK MILE		110.

LEVEL: - FIFTH

PROGRAM: INDUSTRIAL ELECTRONICS

COURSE CODE :- IEE511

COURSE NAME :- PLC & DRIVES

MAX. MARKS: 80 TIME: 3 HRS. DATE: 24/11/2017

#### Instruction:-

- 1) Answer to two sections must be written in separate section answer book provided.
- 2) Figure to the right indicate marks.
- 3) Illustrate your answers with sketches wherever necessary.
- 4) Use of non-programmable pocket calculator is permissible.
- 5) Mathematical and other tables shall be made available on request.
- 6) Assume additional suitable data necessary.
- 7) Use of Mobile is strictly prohibited.

#### Section - I

Marks

#### Q.1 Attempt any **FOUR**

(80)

- a) State Basic elements of drive system.
- b) List the different methods of speed control of induction motor.
- c) State any two drive requirements for steel rolling mills.
- d) List the various stages involved in textile mill.
- e) Draw the circuit diagram Rotor voltage control.
- f) State any two advantages of converter fed induction motor.

## Q.2 Attempt any FOUR

(16)

- a) Give comparision between AC Drives and DC drives (any four points)
- b) Describe the speed-Torque characteristics of induction motor.
- c) Draw and explain slip energy Recovery system.
- d) Which type of motors are used at different stages of cement mill and why?
- e) Describe the role of microprocessor for speed control of DC motor with neat Block diagram.
- f) Write different stages and drives required for sugar mill.

## Q.3 Attempt any FOUR

(16)

- a) Illustrate drives stability with the help of Torque-speed characteristics.
- b) Explain the stator voltage scheme for induction motor control.
- c) Describe the role of micro processor in controlling a stepper motor drive with suitable schematic.
- d) List the different requirements of motor used for paper mill application.
- e) With the help of Block diagram, explain V/F control using square wave inverter.
- f) With the help of circuit diagram, explain how the speed of induction motor is controlled by chopper control

P.T.O.

#### Q.4 Attempt any **FOUR**

(80)

- a) Draw the block diagram of PLC and label it.
- b) Give the advantages of PLC over conventional relay logic.
- c) List different relay type instructions of PLC with symbols (any four)
- d) State four logical instructions.
- e) Draw the ladder diagram for following Boolean equation Y=(A+B). (C+D)
- f) Draw the ladder diagram for EX-OR gate.

### Q.5 Attempt any **FOUR**

(16)

- a) Describe the role of PLC in automation.
- b) Explain the function of memory in PLC system.
- c) Explain high speed encoder with neat diagram.
- d) List and explain arithmatic instructions used in PLC programming.
- e) Draw and explain format of ON delay timer (  $T_{ON}$ ) with waveform.
- f) Develop ladder diagram for 4:1 multiplexer.

#### Q.6 Attempt any FOUR

(16)

- a) Explain the following characteristics of PLC: speed of execution.
- b) Explain in detail RTD input module.
- c) Explain functional blocks of count up CTU and also give the format of counter data file.
- d) Explain any two PLC sequencer instructions and give the parameters in PLC sequencer instructions.
- e) Explain the following data handling instructions i) Move ii) Masked move.
- f) Develop a ladder diagram that will cause output Q to be ON when push button A is ON, or either B or C are ON.

\*\*\*\*\*\*\*

(An Autonomous Institute of Govt. Of Maharashtra)

# ODD TERM END EXAM NOV. / DEC. 2017

EXAM SEAT NO.

LEVEL: - FIFTH

PROGRAM: IE & E&TC

COURSE CODE :- IEE/ETE512

COURSE NAME :- PIC MICROCONTROLLER

MAX. MARKS: 80 TIME: 3 HRS. DATE: - 24/11/2017

#### Instruction:-

- 1) Answer to two sections must be written in separate section answer book provided.
- 2) Figure to the right indicate marks.
- 3) Illustrate your answers with sketches wherever necessary.
- 4) Use of non-programmable pocket calculator is permissible.
- 5) Mathematical and other tables shall be made available on request.
- 6) Assume additional suitable data necessary.
- 7) Use of Mobile is strictly prohibited.

Section - I

Marks

#### 0.1Attempt any FOUR

(80)

- a) State any two features of RISC architecture.
- b) What is the address range for the scratch pad section of the access bank?
- c) What is the status of C and Z flags after the execution of following code? MOVLW FFH **ADDLW**
- d) What is the difference between MOVWF and MOVF instruction?
- e) Indicate when the TMR $\Phi$ IF flag is raised for each of the following mode i) 16 bit ii) 8 bit.
- f) Find the T1CON value for 16 bit mode, no prescalar, timer oscillator OFF, with the clock coming from the PIC 18's crystal.

#### Attempt any FOUR O.2

(16)

- a) Assume that a 1 Hz frequency pulse is connected to input pin T1CK1. Write an assembly language program to display counter values of TMR1H and TMR1L on port B & D respectively.
- b) Write an assembly language program for PIC /18F 458 to generate a square wave of frequency 5 KHz at pin PORT B.Φ. Assume crystal frequency = 10MHz.
- c) Consider two switches are connected to lower two bits of PORT C. Write an assembly language program to send the following ASCII to Port D based on the status of switch.

RC1	RСФ	
ICT C	ΚυΨ	Function
0	0	Send ASCII of '0'
0	1	Send ASCII of '1'
1	0	Send ASCII of '2'
1	1	Send ASCII of '3'

- d) Explain following instructions with example i) LFSR f,k ii) BTFSC f,b,a
- e) Write an assembly language program to copy the value 55H into RAM memory locations 340H to 345H using i) Direct addressing mode ii) A loop.
- f) Write an assembly language program for PIC to transfer the contents of RAM location 20H-2FH to RAM location 2D Φh- 2DFH.

P.T.O

- a) With the help of neat labelled diagram explain the architecture of PIC 18F microcontroller.
- b) With the help of neat diagram explain the 16 bit mode and 8 bit mode of timer Φ of PIC 18F microcontroller.
- c) Explain any four table processing instructions of PIC 18F microcontroller with example.

# Section – II Marks Q.4 Attempt any FOUR (08)

- a) Draw the interrupt vector table for PIC 18.
- b) Give importance of RS and  $R/\overline{W}$  pins of LCD.
- c) Enlist any four applications of Relays.
- d) Give the importance of step angle of stepper motor.
- e) Enlist various sources present for interrupt in PIC 18.
- f) Explain WP Bit of DS 1306 RTC control register.

#### Q.5 Attempt any FOUR

(16)

- a) Write an assembly language program to transmit message "BYE" serially at Baud rate of 9600, 8 Bit data, 1 start and stop Bit continuously (XTAL = 12 MHz)
- b) Write an assembly language program to display "GPKP" on LCD serially.
- c) Write an assembly language program for PIC 18 to transfer letter 'y' serially at Baud rate of 57,600 continuously with (XTAL = 10MHz) Use BRGH=1
- d) Draw a neat interfacing diagram for PIC 18 to stepper motor using opto isolator.
- e) Write an assembly language program to rotate stepper motor in clockwise direction for PIC 18 ( Use 4 normal step sequence)
- f) Explain all pins of DS 1306 RTC chip in detail.

#### Q.6 Attempt any FOUR

(16)

- a) Draw and explain format of INT CON register.
- b) Write an assembly language program to turn ON and turn OFF the lamp using relay connected to PIC 18.
- c) Write a program to rotate DC motor for following condition
  i) if SW=0, DC motor rotates clockwise. ii) if SW = 1, DC motor rotates anticlockwise.
- d) Draw and explain the format of ADCON 1 register in detail.
- e) Write a note on compare mode programming and capture mode programming.
- f) Draw an interfacing of diagram of PIC 18 to DAC 0808 and write a program to generate a sine wave continuously.

- 2) Illustrate your answers with sketches where ever necessary.
- 3) Use of non-programmable pocket calculator is permissible.
- 4) Mathematical and other tables will be made available on request.
- 5) Assume and mention suitable additional data necessary.
- 6) Use of Mobile is strictly prohibited.
- 7) QN>Question No, SQN>Sub-Ouestion No. R> Remembering

QN	S Q N	Y destion 1 ext	R U A	CO CCF108-	Marks
Q.1		Attempt any TWO	-		(00)
	(a)	Illustrate following joints with their symbols			(08)
		i) Spot weld	U	3	
		ii) Single- J butt weld		3	
	b)	Draw free hand sketch for 'V' thread.	U	3	
	c)	Draw free hand sketch for wing nut.	U	3	
Q.2		Attempt any TWO			(16)
	a)	Draw the following orthographic views of the object as shown in	$\vdash$		(10)
		fig.1.			
		i) Sectional F.V (03 marks)	U	1	
		ii) Side view from left (03 marks)		1	
		iii) Top view (02 marks)			
	b)	Fig.2 shows pictorial view of an object using first angle			
		projection method, draw			
		i) Front view (03 marks)			
		ii) Top view (02 marks)	U	2	
		iii) Sectional left hand side view(03 marks)			
		iv) Give important dimensions.			
	c)				
		i) Sectional F.V(03 marks)			
		ii) Top view (02 marks)	U	2	
		iii) Right hand side view (03 marks)

	(0)	Attempt any TWO			(16)
	a)	Fig.4 shows pictorial view of an object. Draw following views of			
		an object by using first angle method.			
		i) F.V. in the direction X (03 marks)	U	2	
		ii) Top view (02 marks)			
		iii) Right hand side view (03 marks)			

,	b)	By using first angle method, draw			1 4
;		i) F.V. in the direction X (03 marks)			
		ii) Top view (02 marks)	U	2	
		iii) Left hand side view (03 marks)			
		Refer Fig.5			
	c)	Fig 6 show pictorial view of an object using first angle method of			
		projection, draw			
		i) Front view (03 marks)		0	
		ii) Top view (02 marks)	U	2	
		iii) Right hand side view(03 marks)			
Q.4		Attempt any <b>ONE</b>			(08)
	a)	Figure no.4 (a) shows two views of an object. Draw by using			
		first angle projection method the following views.		(1)	
		i) Sectional elevation (section A-A) (04 marks)	U	4	
		ii) Left hand side view (missing view) (04 marks)			
	b)	Fig.4 (b). Shows elevation and plan of a machine part. Draw the			
		following views, by using first angle method of projection.		4	
		i) Sectional elevation (section A-A) (04 marks)	U	4	
		ii) Left hand side view (missing view) (04 marks)			
Q.5		Attempt any ONE			(16)
	a)	Fig. no 5 (a). Shows two views of an object. Draw its isometric	Ü		
		view, taking 'O' as an origin. Use natural scale.	U	5	
	b)	i) Construct isometric scale upto 150mm (02 marks)			
		ii) Fig. no 5 (b) (ii) shows two views of an object. Draw its		-	
		isometric projection taking 'O' as an origin by isometric scale.	U	5	
	=	(14 marks)			
Q.6		Attempt any TWO			(16)
	a)	Figure no. 6 (a) shows front view and top view of an a square			
		prism, having a circular hole in the center. Draw its development	U	6	
		of the surface.			
	b)	Figure no 6 (b) shows front view of cone, resting in H.P in first			
		quadrant, cut by three different planes I, II, III. Draw the	U	6	
		development of the lateral surface of this cut cone.			
	c)	Figure no 6 (c) shows front view of a right square pyramid with			
		the sides of base equally inclined to V.P, resting on its base H.P.			
		It is cut by two sectional planes A&B at 60° to each other as		6	
	a)	shown in fig. no 6(c). Draw the development of the lateral			
		surface of the pyramid.
